Executive Summary

This Community Health Needs Assessment (CHNA) was conducted by Cleveland Clinic Hillcrest Hospital (the Hillcrest Hospital or “the hospital”) to identify significant community health needs and to inform development of an Implementation Strategy to address current needs in accordance with the Affordable Care Act¹.

Hillcrest Hospital has been nationally recognized 11 times as one of America’s 100 Top Hospitals®, a designation based on extensive research of U.S. hospitals, as conducted by Thomson Reuters. As a Cleveland Clinic Hospital, Hillcrest facility is linked to one of the most respected healthcare organizations in the world. With 450 registered hospital beds, renovations and expansion in the past several years have provided easier, faster access to healthcare, including: expanded Adult and Pediatric Emergency Departments, 103 new beds, 72 private rooms, family maternity center and Level III Neonatology Unit, Cleveland Clinic Neurological Institute, Comprehensive cardiac services and Comprehensive cancer care.

Additional information on the hospital and its services is available at:
http://my.clevelandclinic.org/locations_directions/RegionalLocations/Hillcresthospital.

The hospital is part of the Cleveland Clinic health system, which includes an academic medical center near downtown Cleveland, eleven regional hospitals in northeast Ohio, a children’s hospital, a children’s rehabilitation hospital, five southeast Florida hospitals, and several other facilities and services across Ohio, Florida, and Nevada.

Cleveland Clinic is a global leader and model of healthcare for the future. We work as a team with the patient at the center of care. As a truly integrated healthcare delivery system, we take on the most complex cases and provide collaborative, multidisciplinary care supported with cutting-edge research and technology. We treat patients and fellow caregivers as family and Cleveland Clinic as our home. Our vision is to become the best place to receive healthcare anywhere, and the best place to work in healthcare. Our goals for achieving that are bold, but reachable: To serve more patients, create more value and improve the well-being of all caregivers. As we grow and double the number of patients served by 2024, everything we do and every place we are located will bear the unmistakable stamp of One Cleveland Clinic –with the same quality, experience and Care Priorities at every location.

Cleveland Clinic’s ability to provide world-class patient care and best-in-class clinicians is the product of our commitment to research and education, which has also contributed significant advancements toward the diagnosis and treatment of complex medical challenges. Figure 1 shows Our Care Priorities, which are to:²

- Care for Patients as if they are our own family
- Treat fellow caregivers as if they are our own family

¹ Internal Revenue Service, Community Health Needs Assessment for Charitable Hospital Organizations – Section 501 (c) (3), <https://www.irs.gov/charities-non-profits/charitable-organizations/requirements-for-501c3-hospitals-under-the-affordable-care-act-section-501r>

² The Cleveland Clinic Mission, Vision and Values <https://my.clevelandclinic.org/about/overview/who-we-are/mission-vision-values>

- Be committed to the communities we serve
- Treat the organization as our home

Figure 1: The Cleveland Clinic Care Priorities

Caring for the Community

Caring for the community is a long-standing priority at Cleveland Clinic. As an anchor institution –a major employer and provider of services in the community –our goal is to create the healthiest community for everyone. We do this through actions and programs to heal, hire and invest for the future.

Cleveland Clinic is much more than a healthcare organization. We are part of the social fabric of the community, creating opportunities for those around us and making the communities we serve healthier. We are listening to our neighbors to understand their needs, now and in the future. The health of every individual affects the broader community.

According to the National Academy of Medicine, only 20% of a person’s health is related to the medical care they receive. There are other factors that have a lifelong impact, accounting for 80% of a person’s overall health.³ These social determinants of health are conditions in which people grow, work and live –including employment, education, food security, housing and several others.⁴

³ Magnan, S. Social Determinants of Health 101 for Healthcare: Five Plus Five, National Academy of Medicine. <https://nam.edu/social-determinants-of-health-101-for-health-care-five-plus-five/>

⁴ Social Determinants of Health, World Health Organization. https://www.who.int/health-topics/social-determinants-of-health#tab=tab_1

In order to address health disparities, we lead efforts in clinical and non-clinical programming, advocacy, partnerships, sponsorship and community investment. We are actively partnering with leaders to help strengthen community resources and mitigate the impact of disparities in social determinants of health. By engaging with partners who share our commitment, we can make a difference in creating a better, healthier community for everyone.⁵

Additional information about Cleveland Clinic is available at:
<https://my.clevelandclinic.org/>.

Each Cleveland Clinic hospital also is dedicated to the communities it serves. Each Cleveland Clinic hospital conducts a CHNA to understand and plan for the current and future health needs of residents and patients in the communities it serves. The CHNAs inform the development of strategies designed to improve community health, including initiatives designed to address social determinants of health.

These assessments are conducted using widely accepted methodologies to identify the significant health needs of a specific community. The assessments also are conducted to comply with federal and state laws and regulations including IRS requirements for 501(c)(3) Hospitals under the Affordable Care Act⁶.

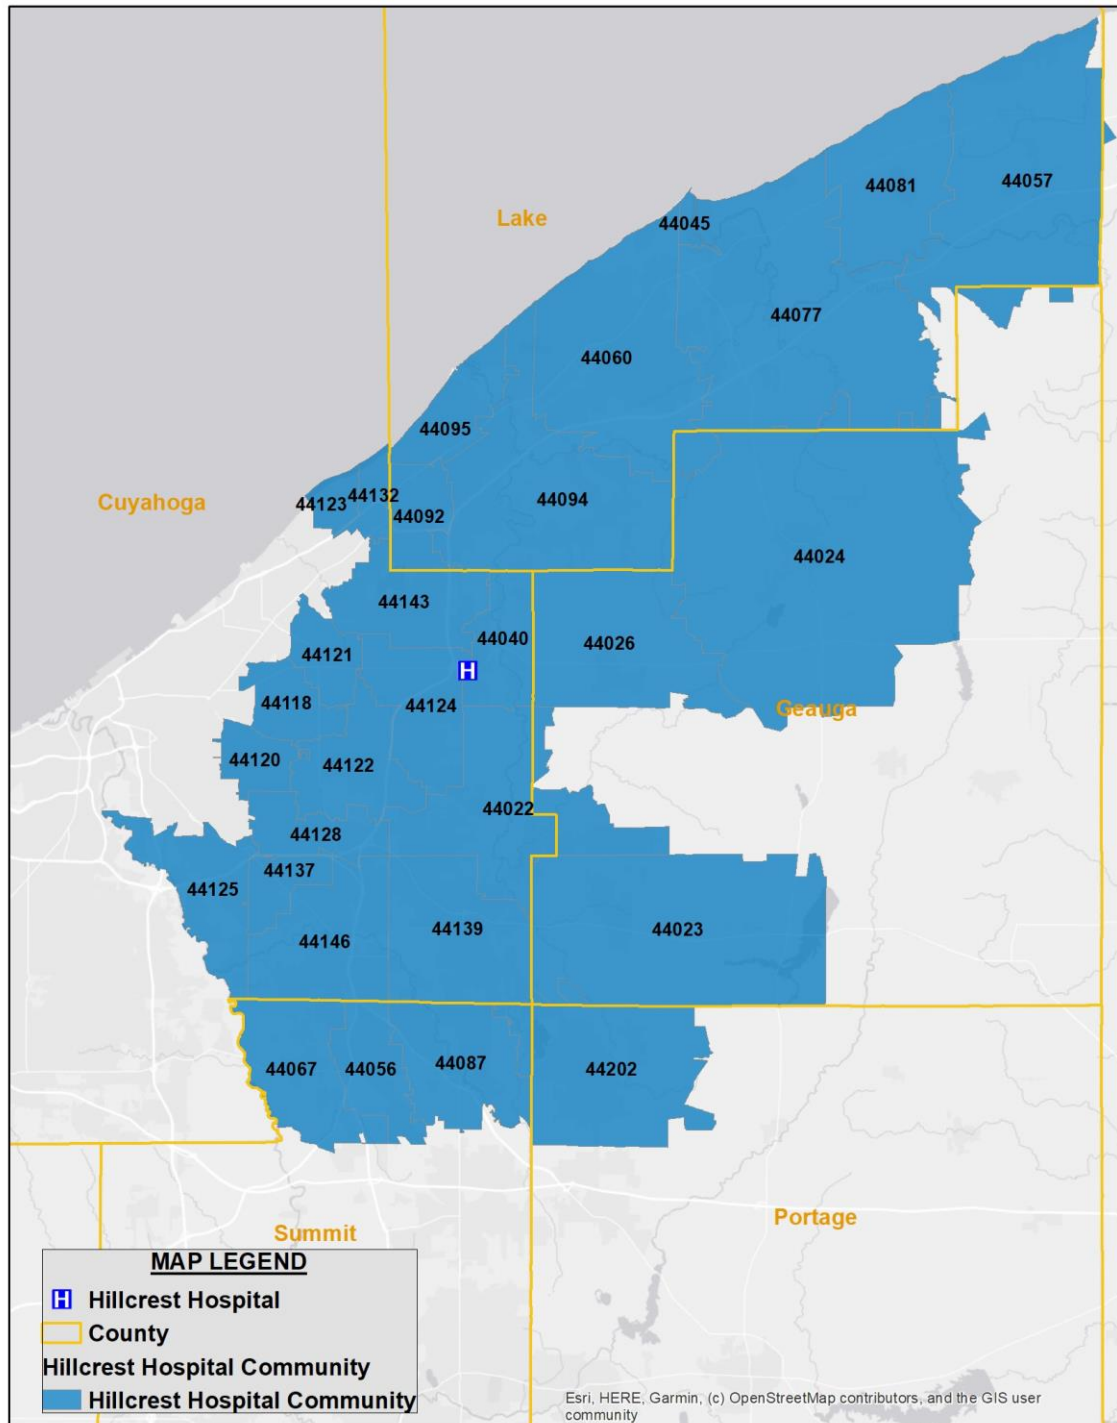

Community Definition

The community definition describes the zip codes where approximately 75% of Hillcrest Hospital patients reside. Figure 2 shows the service area for the Hillcrest Hospital Community. A table with zip codes and the associated postal names that comprise the community definition is located in [Appendix C](#).

⁵ Cleveland Clinic, Community Commitment, <https://my.clevelandclinic.org/about/community#:~:text=Caring%20for%20the%20community%20is,and%20invest%20for%20the%20future>.

Figure 2: Hillcrest Hospital Community Definition

Secondary Data Summary

Secondary data used for this assessment were collected and analyzed from Conduent Healthy Communities Institute's (HCI) community indicator database. The database, maintained by researchers and analysts at HCI, includes 300 community indicators

covering at least 28 topics in the areas of health, social determinants of health, and quality of life. The data are primarily derived from state and national public secondary data sources. The value for each of these indicators is compared to other communities, nationally set targets and to previous time periods.

Due to variability in which public health data sets are available, data within this report may be presented at various geographic levels:

- The Hillcrest Hospital Community Definition—an aggregate of the 31 zip codes described in the Community Definition.
- Cuyahoga, Lake, Summit, Geauga, and Portage Counties—the four counties comprising the Hillcrest Hospital Community Definition

Primary Data Summary

Qualitative data collected from community members through key stakeholder interviews and a community engagement session comprised the primary data component of the CHNA and helped to inform selection of the significant health needs.

Conduent Healthy Communities Institute interviewed 20 key stakeholders from a diverse spectrum of community-based organizations and public health departments. To provide additional support and corroboration of vital community input, The Cleveland Clinic Foundation and Conduent Healthy Communities Institute facilitated a community engagement session featuring the Hillcrest Hospital Community Advisory Council (CAC) members. During the session, CAC members offered perspectives on the most important health problems in the community, barriers and challenges to improving health, identified the most underserved populations, discussed potential solutions to health challenges faced and offered success stories from existing program implementation.

Prioritized Health Needs

Following a comprehensive review of the significant community health needs throughout the Cleveland Clinic Health System, analysis of local county and state needs assessments and emerging trends, the following priority health needs were identified:

- Access to Healthcare
- Behavioral Health
- Chronic Disease Prevention and Management
- Maternal and Child Health
- Socioeconomic Issues

Access to Healthcare

Access to Healthcare secondary data analysis results describe community needs related to consumer expenditures for insurance, medical expenses, medicines and other supplies. With more expansive parameters, primary data describes limitations to accessing

healthcare described in terms of transportation challenges, resource limitations and availability of primary care and other prevention services in local neighborhoods.

Behavioral Health

Behavioral Health encompasses two subtopics—Mental Health and Substance Use—into a single health need. Mental health secondary data indicators define suicide, Alzheimer’s disease, depression and self-reported poor mental health rates. Similarly, Substance Use data outline rates related to alcohol and drug use including mortality rates due to drug overdoses. Primary data links the two together as community members and key stakeholders describe mental health challenges in the community, exacerbated by COVID-19 related stressors, resulting in increased alcohol and drug use starting in adolescence as a means of coping.

Chronic Disease Prevention and Management

This health topic encompasses several subtopics where information is available including Older Adult Health; Nutrition and Healthy Eating; Cancer; Chronic Diseases; Diabetes; Heart Disease and Stroke; and COVID-19. By addressing these issues in concert, the Cleveland Clinic Foundation hopes to impact chronic disease rates including those described in the Synthesis and Prioritization section of this report (page 36).

Maternal and Child Health

Maternal and Child Health has been a continuing health need in the community with a focus on Children’s Health, Women’s Health and Maternal, Fetal and Infant health. Secondary data indicators include a range of children’s health needs from babies with low birth weight to consumer expenditures on childcare. Primary data describes disparities among low-income and ethnic minority and refugee populations and link access to healthcare with pre-natal care.

Socioeconomic Issues

Socioeconomic Issues for this report are defined as a subset of social determinants of health (SDOH). Prevention & Safety, Affordable Housing, Violence, Falls and Environmental Issues were the prioritized health needs described by primary and secondary data.

Additional Community Health Themes

In addition to the Prioritized Health Needs, other themes were prevalent in considering community health. These themes are intertwined in all community health components and impact multiple areas of community health strategies and delivery.

Health Equity

Health Equity issues in our communities were illuminated by COVID-19. They focus on the fair distribution of health determinants, outcomes and resources across communities.⁷ Health Equity and reduction of health disparities are indicated as overarching themes in all our prioritized needs. It is described in detail and specifically as it relates to the Hillcrest Hospital Community in both the Disparities and Health Equity section (page 27) of the report as well as in the Synthesis and Prioritization section (page 36). Special consideration will be given to addressing prioritized health needs through a health equity lens in the Hillcrest Hospital implementation strategy report.

Social Determinants of Health

Social determinants of health (SDOH) are the conditions in the environment where people are born, live, learn, work, play, worship and age that affect a wide range of health, functioning and quality of life outcomes and risks. Social determinants of health (SDOH) are major drivers of behaviors that impact individual and community health outcomes. For a full description of social determinants of health (SDOH) see the highlighted demographic section entitled Social & Economic Determinants of Health.

Medical Research and Health Professions Education

Cleveland Clinic has a tripartite mission to care for the sick and to improve patient care through research and education. Through research we discover cures and treatment of diseases affecting our communities. This cross-cutting issue was evident in addressing the emergent pandemic of COVID 19. Our education programs train qualified healthcare providers to support the needs of our patients and communities, reducing healthcare access issues. This has been of historical importance to the work, care and mission of Cleveland Clinic and will continue to be incorporated as Hillcrest Hospital moves toward development of the implementation strategy report.

Medical Research and Health Professions Education

Cleveland Clinic has a tripartite mission to care for the sick and to improve patient care through research and education.

Through research we discover cures and treatment of diseases affecting our communities.

Our education programs train qualified healthcare providers to support the needs of our patients and communities, reducing healthcare access issues.

Demographics of the Hillcrest Hospital Community

The demographics of a community significantly impact its health profile.⁸ Different racial, ethnic, age, and socioeconomic groups may have unique needs and require varied approaches to health improvement efforts. The following section explores the demographic profile of the community residing in the Hillcrest Hospital Community Definition.

Geography and Data Sources

Data are presented in this section at the geographic level of the Hillcrest Hospital Community Definition. Comparisons to the county, state, and national value are also provided when available. All demographic estimates are sourced from Claritas Pop-Facts® (2022 population estimates) and American Community Survey⁹ one-year (2019) or five-year (2015-2019) estimates unless otherwise indicated.

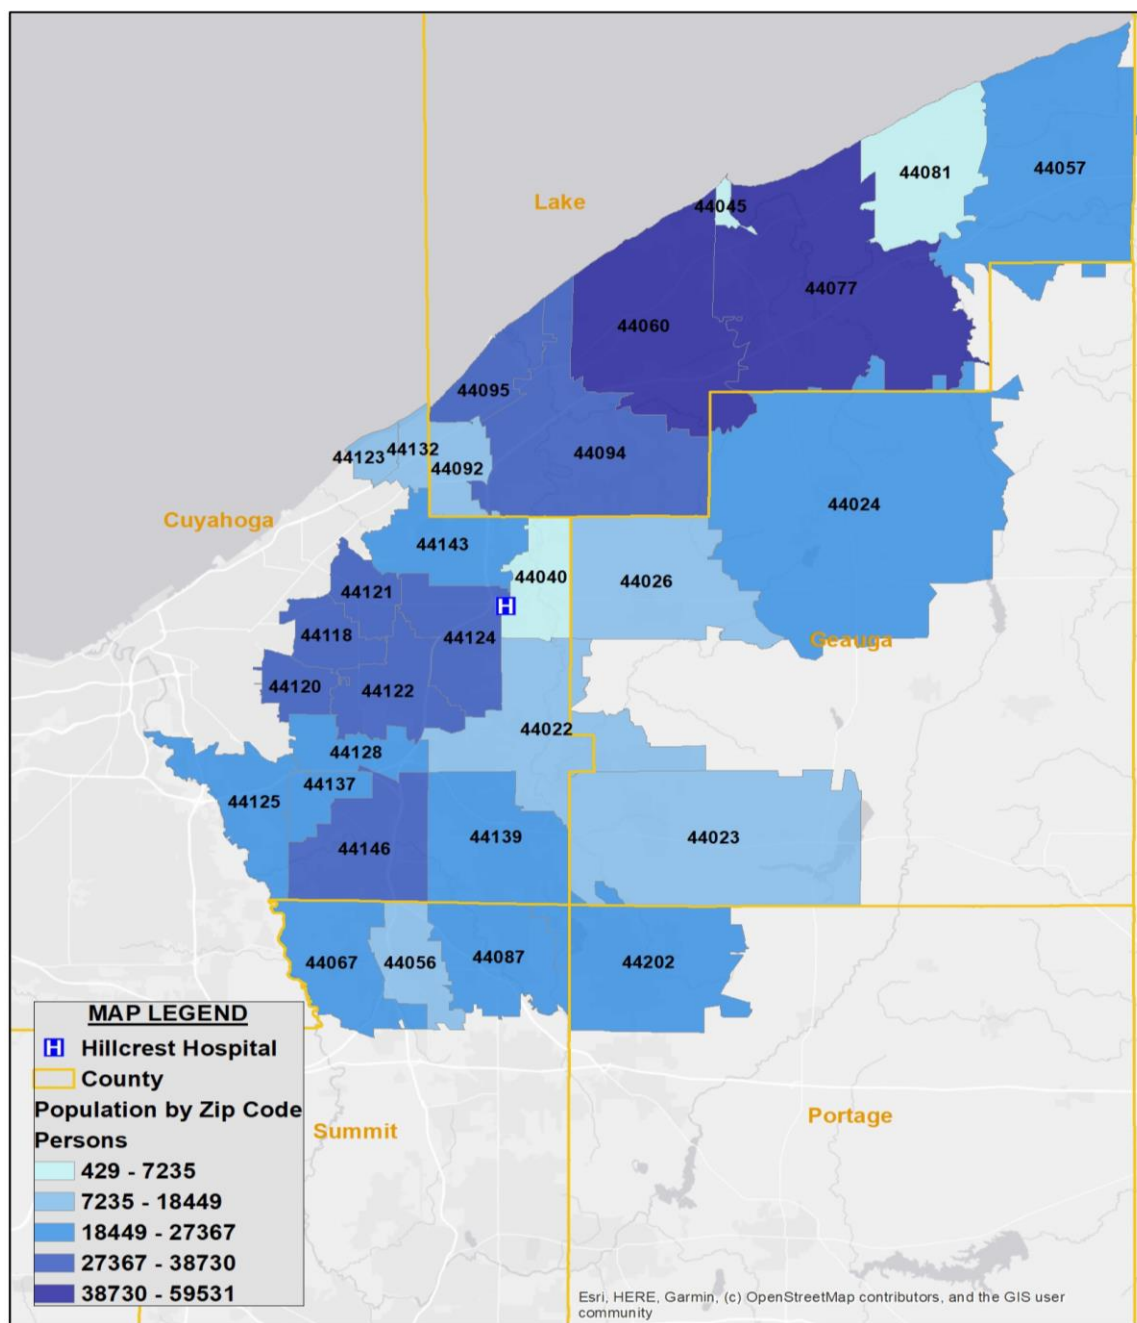

Population

According to the 2022 Claritas Pop-Facts® population estimates, the Hillcrest Hospital community has an estimated population of 770,224 persons. Figure 3 shows the population size by each zip code, with the darkest blue representing the zip codes with the largest population. Appendix C provides the actual population estimates for each zip code. The most populated zip code area within the Hillcrest Hospital Community is zip code 44060 (Lake) with a population of 59,531.

⁸ National Academies Press (US); 2002. 2, Understanding Population Health and Its Determinants. Available from: <https://www.ncbi.nlm.nih.gov/books/NBK221225/>

⁹ American Community Survey. <https://www.census.gov/programs-surveys/acs>

Figure 3: Population by Zip Code

County values: Claritas Pop-Facts® (2022 population estimates)

Age

Children (0-17) comprised 19.8% of the population in the Hillcrest Hospital Community which is less when compared to the state of Ohio (21.8%). The Hillcrest Hospital Community has a higher proportion of residents aged 65+ 21.7% when compared with the state of Ohio at (18.6%). Figure 4 shows further breakdown of age categories.

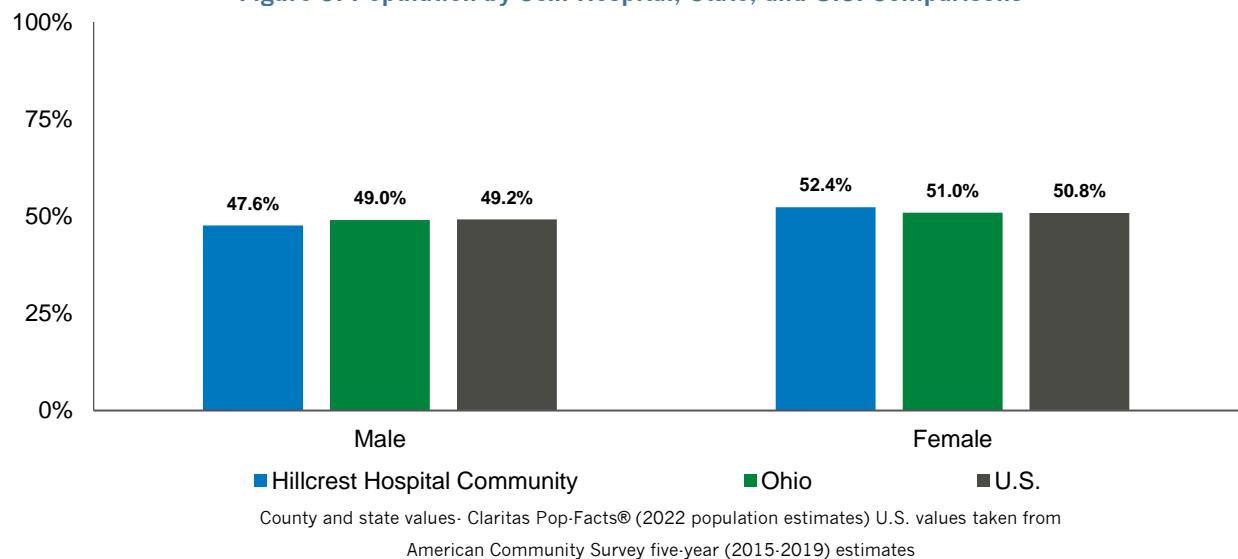

Figure 4: Population by Age: Hospital and State Comparisons

Sex

Figure 5 shows the population of the Hillcrest Hospital comprise 52.4% of the population in the Hillcrest Hospital Community which is greater than Ohio (51.0%) and the U.S. (50.8%) values.

Figure 5: Population by Sex: Hospital, State, and U.S. Comparisons

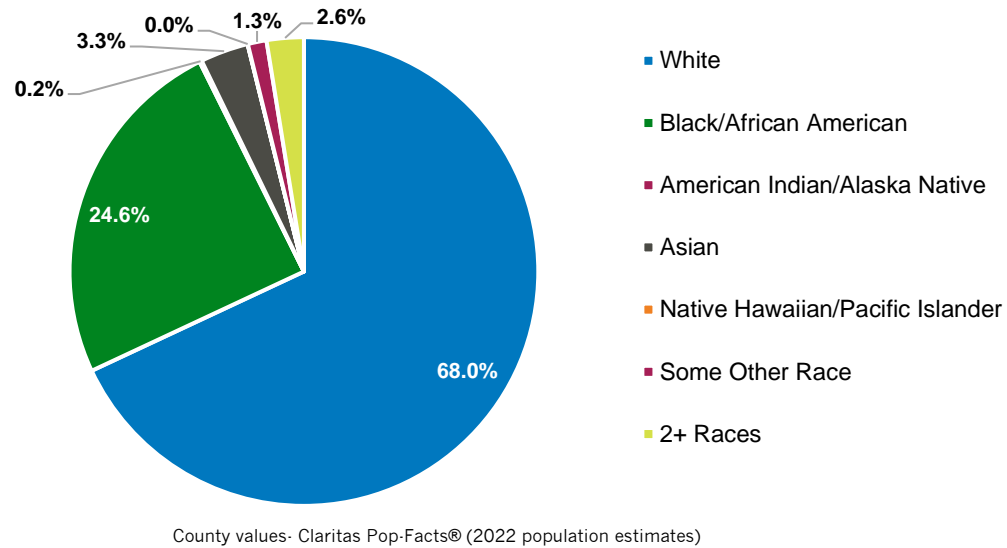

Race and Ethnicity

Race and ethnicity contribute to the opportunities individuals and communities have to be healthy. The racial and ethnic composition of a population is also important in planning for future community needs, particularly for schools, businesses, community centers, healthcare, and childcare.

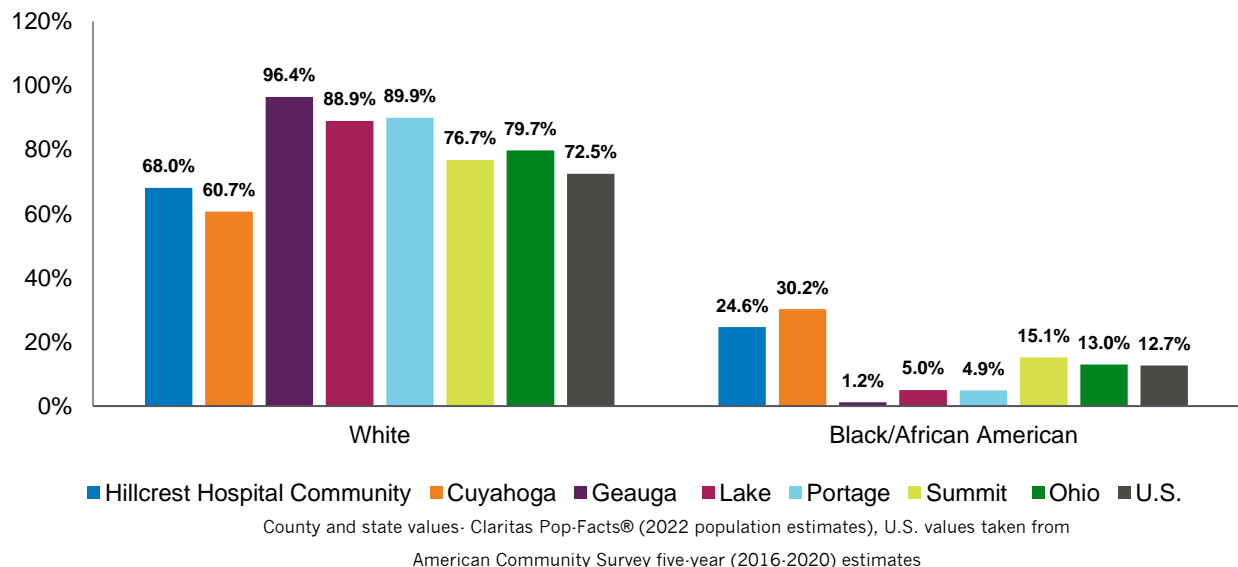

The racial makeup of Hillcrest Hospital area shows 68.0% of the population identifying as White, as indicated in Figure 6. The proportion of Black/African American community members is the second largest of all races in the Hillcrest Hospital Community at 24.6%.

Figure 6: Population by Race: The Hillcrest Hospital Community

Those community members identifying as White represent a lower proportion of the population in the Hillcrest Hospital Community (68.0%) when compared to Ohio (79.7%) and the U.S. (72.5%), while Black/African American community members represent a higher proportion of population in the Hillcrest Hospital Community (24.6%) when compared to Ohio (13.0%) and the U.S. (12.7%). Cuyahoga County has the largest percentage of community members identifying as Black/African American (30.2%) compared to the other counties included in the Hillcrest Hospital Community Definition. (Figure 7)

Figure 7: Population by Race: The Hillcrest Hospital Community, County, State, and U.S. Comparisons

As shown in Figure 8, 3.7% of the population in the Hillcrest Hospital Community identify as Hispanic/Latino. This is a smaller proportion of the population when compared to both Ohio (4.4%) and the U.S. (18.0%). Cuyahoga County has the largest percentage of community members who identify as Hispanic/Latino (6.8%).

Figure 8: Population by Ethnicity: Hospital, County, State, and U.S. Comparisons

County and state values- Claritas Pop-Facts® (2022 population estimates), U.S. values taken from American Community Survey five-year (2015-2019) estimates

Language and Immigration

Understanding countries of origin and language spoken at home can help inform the cultural and linguistic context for the health and public health system.

In the Hillcrest Hospital Community, 91.6% of the population age five and older speak only English at home, which is lower than the state value of 92.7% but higher than the national value of 78.4% (Figure 9). This data indicates that 2.5% of the population in the Hillcrest Hospital Community speak Spanish, 1.3% speak an Asian/Pacific Islander language, 3.7% speak an Indo-European Language, and 0.9% speak Other Languages at home.

Figure 9: Population 5+ by Language Spoken at Home: Hospital, State, and U.S. Comparisons

County and state values- Claritas Pop-Facts® (2022 population estimates), U.S. values taken from American Community Survey five-year (2015-2019) estimates

Highlighted Demographics: Social & Economic Determinants of Health

This section explores the economic, environmental, and social determinants of health impacting the Hillcrest Hospital Community. The social determinants of health are the non-medical factors that influence health outcomes. They are the conditions in which people are born, grow, work, live, and age, and the wider set of forces and systems shaping the conditions of daily life. These forces and systems include economic policies and systems, development agendas, social norms, social policies, and political systems¹⁰. The Social Determinants of Health (SDOH) can be grouped into five domains. Figure 10 shows the Healthy People 2030 Social Determinants of Health domains¹¹.

Figure 10: Healthy People 2030 Social Determinants of Health Domains

Geography and Data Sources

Data in this section are presented at various geographic levels (zip code and/or county) depending on data availability. When available, comparisons to county, state, and/or national values are provided. It should be noted that county level data can sometimes mask what could be going on at the zip code level in many communities. While indicators may be strong when examined at a higher level, zip code level analysis can reveal disparities.

¹⁰ World Health Organization. Social Determinants of Health. https://www.who.int/health-topics/social-determinants-of-health#tab=tab_1

¹¹ Healthy People 2030, 2022. Social Determinants of Health Domains. <https://health.gov/healthypeople/priority-areas/social-determinants-health>

All demographic estimates are sourced from Claritas Pop-Facts® (2022 population estimates) and American Community Survey one-year (2019) or five-year (2015-2019) estimates unless otherwise indicated.

Income

Income has been shown to be strongly associated with morbidity and mortality, influencing health through various clinical, behavioral, social, and environmental factors. Those with greater wealth are more likely to have higher life expectancy and reduced risk of a range of health conditions including heart disease, diabetes, obesity, and stroke. Poor health can also contribute to reduced income by limiting one's ability to work.¹²

Figure 11 provides a breakdown of households by income in the Hillcrest Hospital Community Definition. A household income of \$50,000 - \$74,999 is shared by the largest proportion of households in the Hillcrest Hospital Community (17.1%). Households with an income of less than \$15,000 make up 8.7% of households in the Hillcrest Hospital Community.

Figure 11: Households by Income: The Hillcrest Hospital Community

The median household income for the Hillcrest Hospital Community is \$71,252, which is higher than the state value of \$65,070 and national value of \$62,843 (Figure 12).

¹² Robert Wood Johnson Foundation. Health, Income, and Poverty.
<https://www.rwjf.org/en/library/research/2018/10/health--income-and-poverty-where-we-are-and-what-could-help.html>

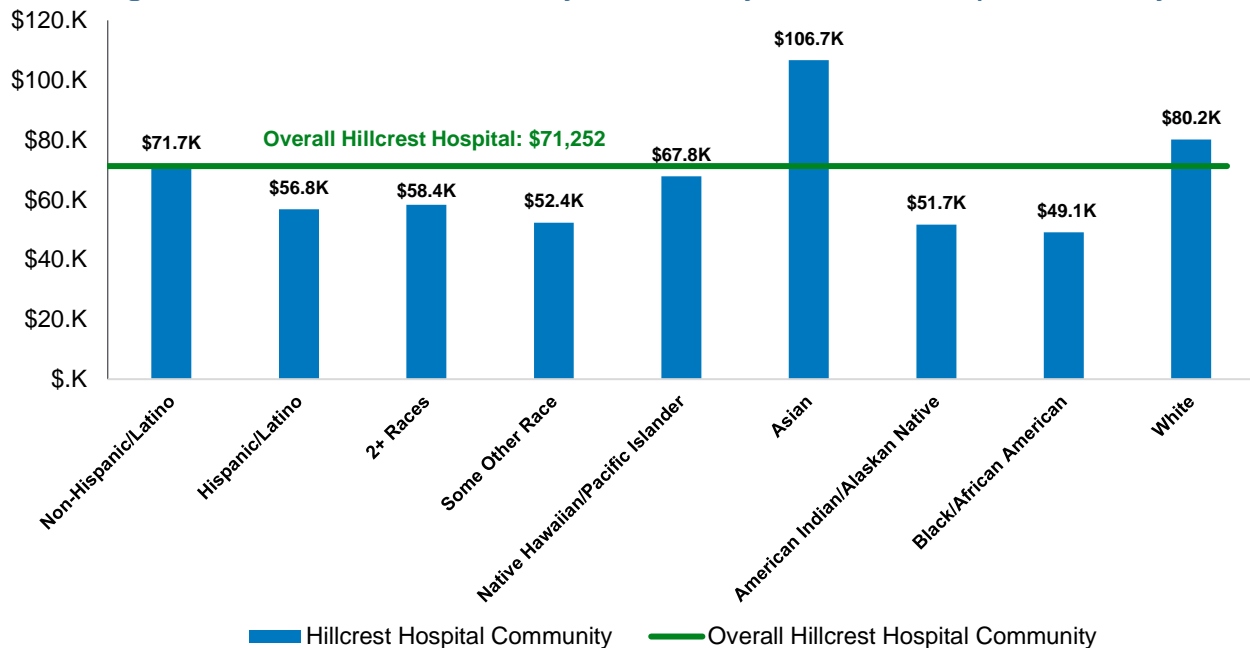

Figure 12: Household Income by: Hospital, County, State, and U.S. Comparisons

County and state values- Claritas Pop-Facts® (2022 population estimates), U.S. values taken from American Community Survey five-year (2015-2019) estimates

Figure 13 shows the median household income by race and ethnicity. Three racial/ethnic groups – White, Asian, and Non-Hispanic/Latino– have median household incomes above the overall median value. All other races have incomes below the overall value, with the Black/African American population having the lowest median household income at \$49,108.

Figure 13: Median Household Income by Race/Ethnicity: The Hillcrest Hospital Community

County values- Claritas Pop-Facts® (2022 population estimates)

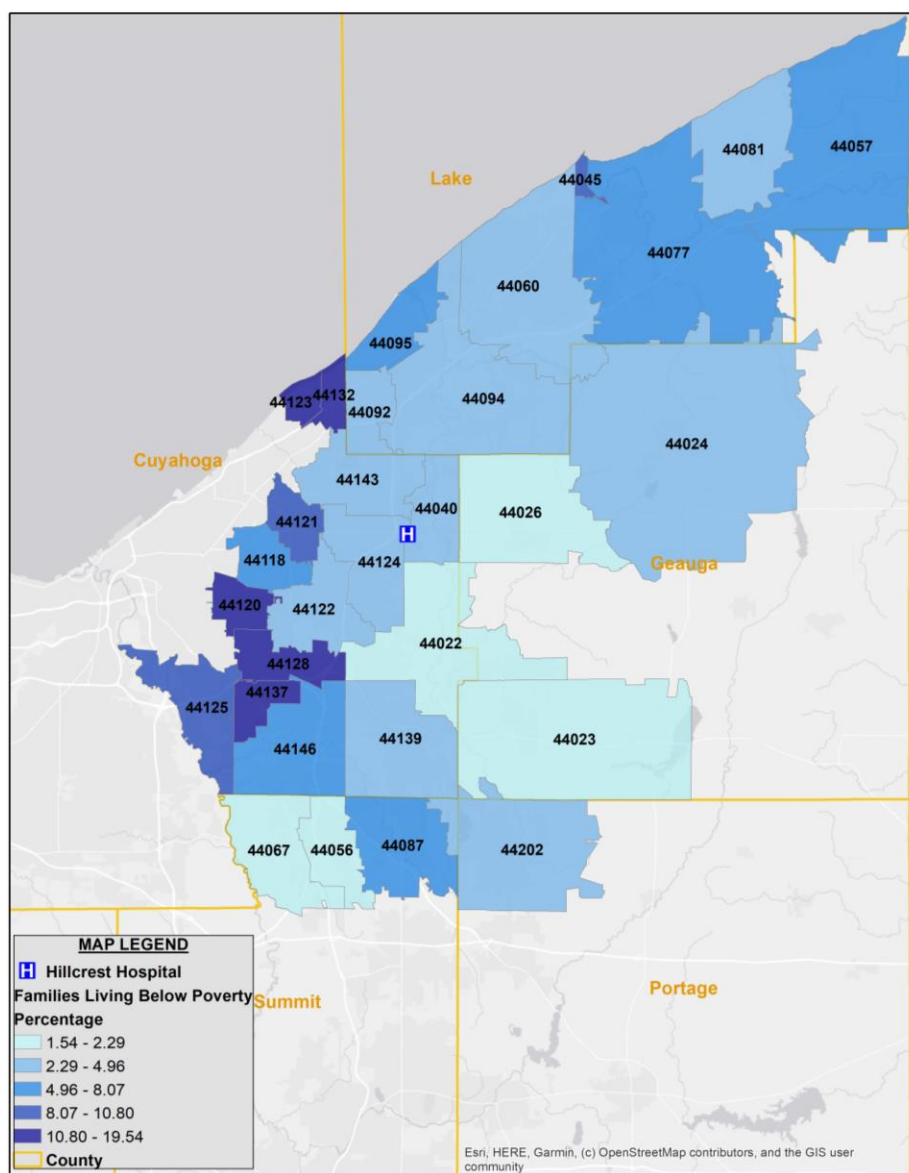

Poverty

Federal poverty thresholds are set every year by the Census Bureau and vary by size of family and ages of family members. People living in poverty are less likely to have access

to healthcare, healthy food, stable housing, and opportunities for physical activity. These disparities mean people living in poverty are more likely to experience poorer health outcomes and premature death from preventable diseases.¹³

Figure 14 shows the percentage of families living below the poverty level by zip code. The darker blue colors represent a higher percentage of families living below the poverty level, with zip codes 44128 (Cleveland) and 44120 (Cleveland) having the highest percentages at 19.54% and 16.4%, respectively. Overall, 7.6% of families in the Hillcrest Hospital Community live below the poverty level, which is lower than both the state value of 9.6% and the national value of 9.5%. The percentage of families living below poverty for each zip code in the Hillcrest Hospital Community is provided in Appendix C

Figure 14: Families Living Below Poverty

County values- Claritas Pop-Facts® (2022 population estimates)

¹³ U.S. Department of Health and Human Services, Healthy People 2030. <https://health.gov/healthypeople/objectives-and-data/browse-objectives/economic-stability/reduce-proportion-people-living-poverty-sdoh-01>

Employment

A community's employment rate is a key indicator of the local economy. An individual's type and level of employment impacts access to healthcare, work environment, health behaviors, and health outcomes. Stable employment can help provide benefits and conditions for maintaining good health. In contrast, poor or unstable work and working conditions are linked to poor physical and mental health outcomes.¹⁴

Unemployment and underemployment can limit access to health insurance coverage and preventive care services. Underemployment is described as involuntary part-time employment, poverty-wage employment, and insecure employment.¹⁴

Type of employment and working conditions can also have significant impacts on health. Work-related stress, injury, and exposure to harmful chemicals are examples of ways employment can lead to poorer health.¹⁴

Figure 15 shows the population aged 16 and over who are unemployed. The unemployment rate for the Hillcrest Hospital Community is 4.7%, which is same as the state value of 4.7% and lower than the national value of 5.3%.

Figure 15: Population 16+ Unemployed: Hospital, County, State, and U.S. Comparisons

County and state values- Claritas Pop-Facts® (2022 population estimates), U.S. values taken from American Community Survey five-year (2015-2019) estimates

Education

Education is an important indicator for health and wellbeing. Education can lead to improved health by increasing health knowledge, providing better job opportunities and higher income, and improving social and psychological factors linked to health. People with higher levels of education are likely to live longer, to experience better health outcomes, and practice health-promoting behaviors.¹⁵ Figure 16 shows the percentage of the population 25 years or older by educational attainment.

¹⁴ U.S. Department of Health and Human Services, Healthy People 2030.
<https://health.gov/healthypeople/objectives-and-data/social-determinants-health/literature-summaries/employment>

¹⁵ Robert Wood Johnson Foundation, Education and Health.
<https://www.rwjf.org/en/library/research/2011/05/education-matters-for-health.html>

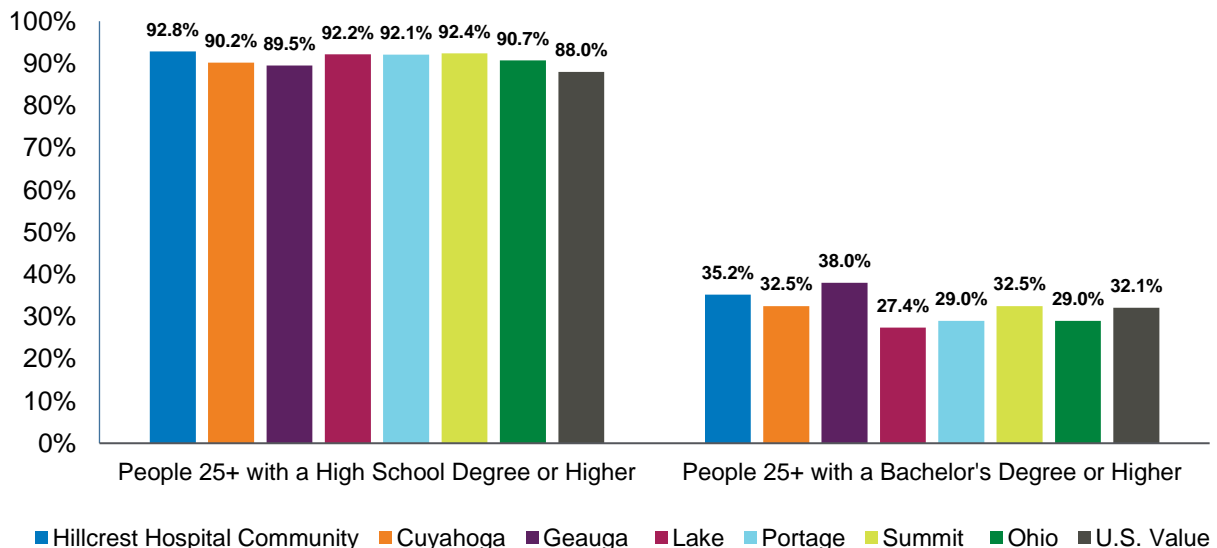

Figure 16: Population 25+ by Education Attainment: The Hillcrest Hospital Community

Another indicator related to education is on-time high school graduation. A high school diploma is a requirement for many employment opportunities and for higher education. Not graduating high school is linked to a variety of negative health impacts, including limited employment prospects, low wages, and poverty.¹⁶

Figure 17 shows that the Hillcrest Hospital Community has a higher percentage of residents with a high school degree or higher (92.8%) and bachelor's degree or higher (35.2%) when compared to the state of Ohio value (90.7% and 29.0%) and the U.S. value (88.0% and 32.1%) respectively.

Figure 17: Population 25+ by Education Attainment: Hospital, County, State, and U.S. Comparisons

County and state values- Claritas Pop-Facts® (2022 population estimates), U.S. values taken from American Community Survey five-year (2015-2019) estimates

¹⁶ U.S. Department of Health and Human Services, Healthy People 2030.
<https://health.gov/healthypeople/objectives-and-data/social-determinants-health/literature-summaries/high-school-graduation>

Housing

Safe, stable, and affordable housing provides a critical foundation for health and wellbeing. Exposure to health hazards and toxins in the home can cause significant damage to an individual or family's health.¹⁷

Figure 18 shows the percentage of houses with severe housing problems. This indicator measures the percentage of households with at least one of the following problems: overcrowding, high housing costs, lack of kitchen, or lack of plumbing facilities. Cuyahoga County has the highest percentage of houses with severe housing problems.

Figure 18: Severe Housing Problems: County, State, And U.S. Comparisons

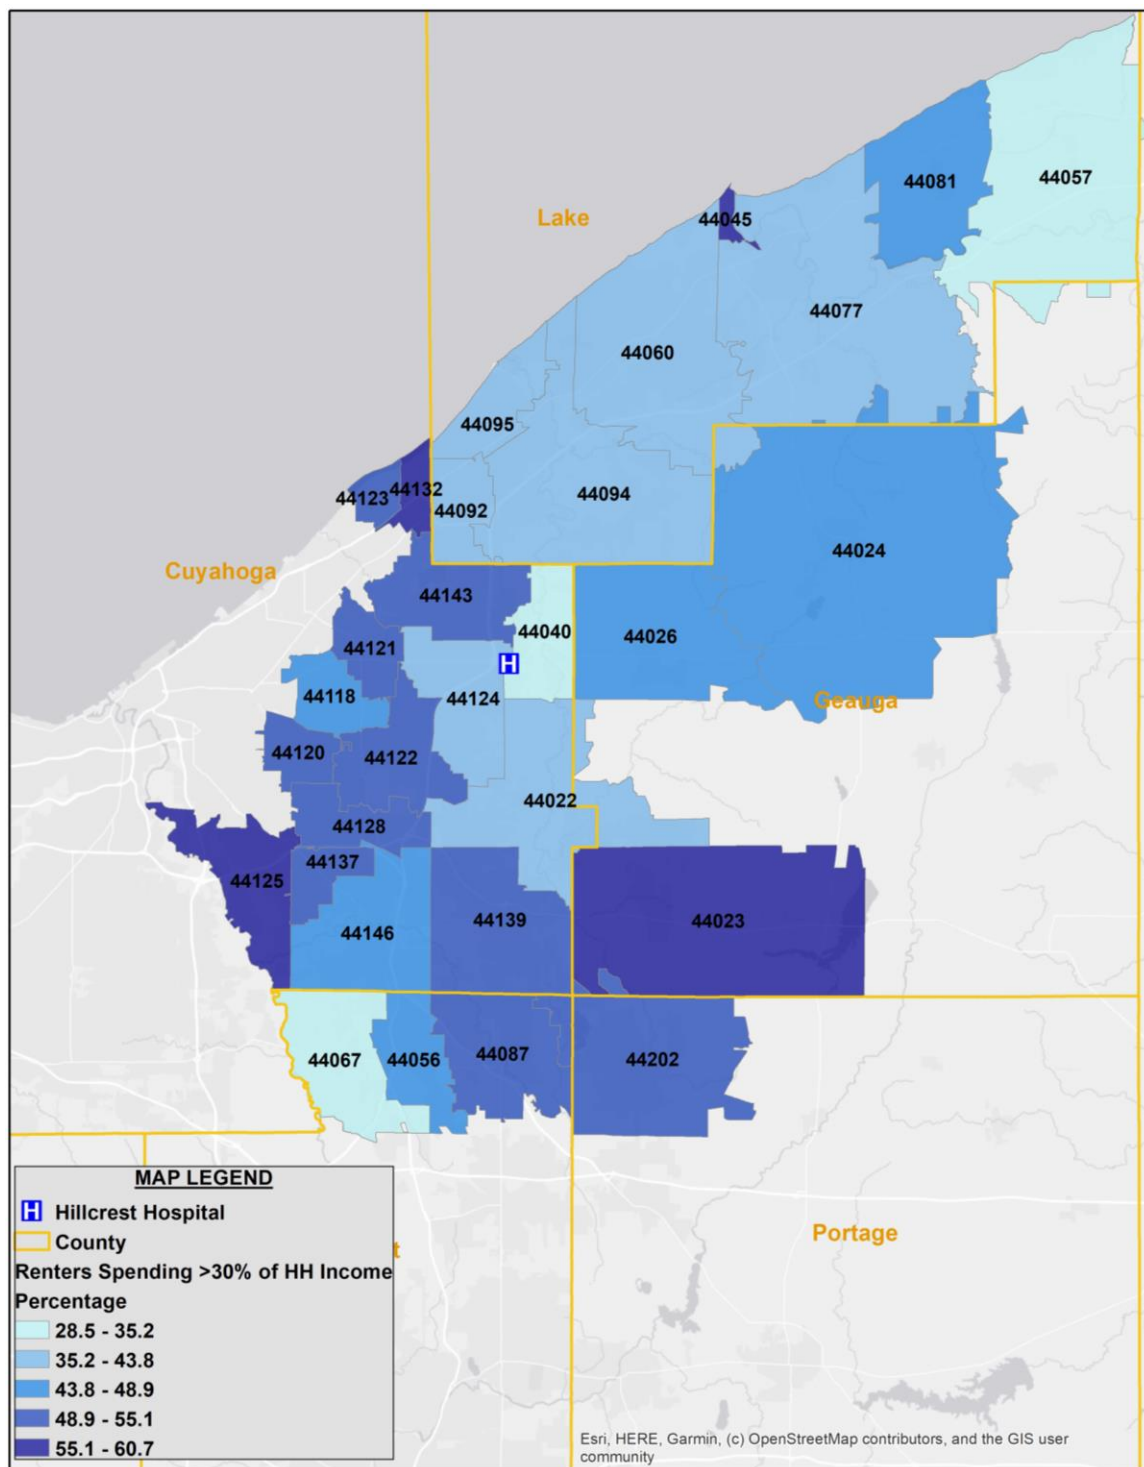

When families must spend a large portion of their income on housing, they may not have enough money to pay for things like healthy foods or healthcare. This is linked to increased stress, mental health problems, and an increased risk of disease.¹⁸

Figure 19 shows the percentage of renters who are spending 30% or more of their household income on rent.

¹⁷ County Health Rankings, Housing and Transit. <https://www.countyhealthrankings.org/explore-health-rankings/measures-data-sources/county-health-rankings-model/health-factors/physical-environment/housing-and-transit>

Figure 19: Renters Spending 30% Or More Of Household Income on Rent

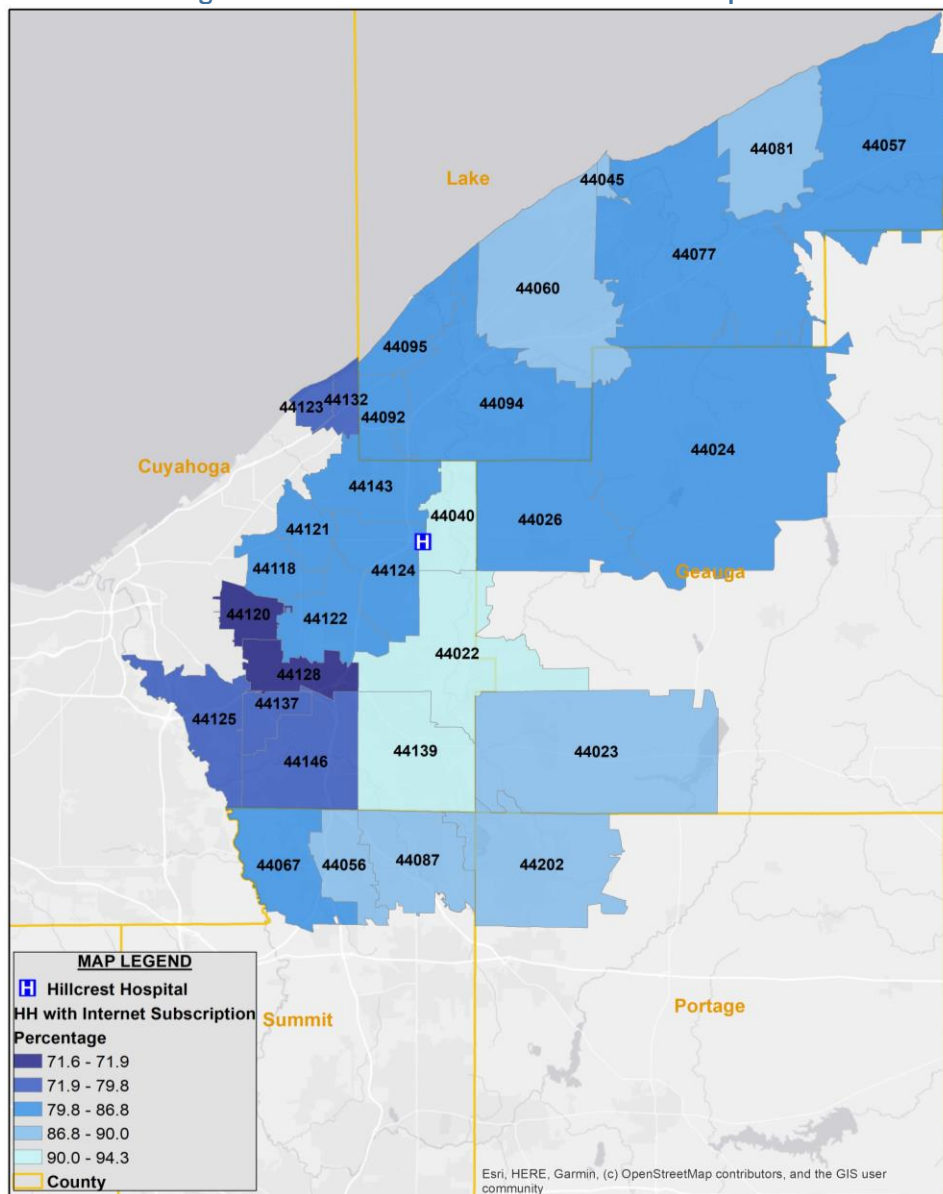

County values- American Community Survey five-year (2015-2019) estimates

Neighborhood and Built Environment

Internet access is essential for basic healthcare access, including making appointments with providers, getting test results, and accessing medical records. Access to the internet is also increasingly essential for obtaining home-based telemedicine services.¹⁹ Internet access may also help individuals seek employment opportunities, conduct remote work, and participate in online educational activities.¹⁹

Figure 20 shows the percentage of households that have an internet subscription. 44128 (Cleveland) has the least percentage of households with internet connection, represented by darkest shade of blue on the map.

Figure 20: Households with an Internet Subscription

Highlighted Demographics: Disparities and Health Equity

Identifying disparities by population groups and geography helps to inform and focus priorities and strategies. Understanding disparities also helps us better understand root causes that impact health in a community and inform action towards health equity.

Health Equity

Health equity focuses on the fair distribution of health determinants, outcomes, and resources across communities.²⁰ National trends have shown that systemic racism, poverty, and gender discrimination have led to poorer health outcomes for groups such as Black/African American, Hispanic/Latino, Indigenous, communities with incomes below the federal poverty level, and LGBTQ+ communities.²¹

Race, Ethnicity, Age & Gender Disparities

Primary and secondary data revealed significant community health disparities by race, ethnicity, gender, and age. It is important to note that the data is presented to show differences and distinctions by population groups. And a data variation within each population group may be as great as that between different groups. For instance, Asian or Asian and Pacific Islander persons encompasses individuals from over 40 different countries with very different languages, cultures, and histories in the U.S. Information and themes captured through key informant interviews and community engagement session discussions have been shared to provide a more comprehensive and nuanced understanding of each community's experiences.

Secondary Data

Community health disparities were assessed in the secondary data using the Index of Disparity²² analysis, which identifies disparities based on how far each subgroup (by race, ethnicity, or gender) is from the overall county value. For more detailed methodology related to the Index of Disparity, see Appendix A.

Table 1 below identifies secondary data indicators with a statistically significant race or ethnic disparity for the Hillcrest Hospital Community, based on the Index of Disparity.

Table 1: Indictors with Significant Race or Ethnic Disparities

Health Indicator	Group(s) Negatively Impacted
Age-Adjusted Death Rate due to Diabetes	Black/African American
Age-Adjusted Death Rate due to Kidney Disease	Black/African American
Age-Adjusted Death Rate due to Prostate Cancer	Black/African American
Babies with Very Low Birth Weight	Black/African American, Asian/Pacific Islander
Children Living Below Poverty Level	Black/African American, Hispanic/Latino, Other Race
Families Living Below Poverty Level	American Indian/Alaska Native, Asian, Black/African American, Hispanic/Latino, Other Race
HIV/AIDS Prevalence Rate	Black/African American, Hispanic/Latino
People 65+ Living Below Poverty Level	American Indian/Alaska Native, Black/African American, Hispanic/Latino, Other Race
People Living Below Poverty Level	American Indian/Alaska Native, Black/African American, Hispanic/Latino, Other Race, Two or More Races
Persons without Health Insurance	Hispanic/Latino, Other Race
Workers Commuting by Public Transportation	American Indian/Alaska Native, White (Non-Hispanic)
Workers who Walk to Work	Two or More Races
Young Children Living Below Poverty Level	Black/African American, Hispanic/Latino, Native Hawaiian/Pacific Islander, Other Race,

The Index of Disparity analysis for Cuyahoga, Geauga, Lake, Portage, and Summit counties reveals that the Black/African American, Hispanic/Latino, American Indian/Alaskan Native, Two or More Races, Native Hawaiian/Pacific Islander, Asian, and Other Race group populations are disproportionately impacted by various measures of poverty, which is often associated with poorer health outcomes. These indicators include Families Living Below Poverty Level, Children Living Below Poverty Level, People 65+ Living Below Poverty Level, Young Children Living Below Poverty Level, and People Living Below Poverty Level. Furthermore, Black/African American, and Hispanic/Latino populations are disproportionately impacted in HIV/AIDS Prevalence Rate. Black/African American and Asian/Pacific Islander groups are disproportionately impacted by Babies with Very Low Birth Weight. Additionally, Black/African American populations experience a heavier burden related to chronic diseases, such as diabetes and kidney disease. Hispanic/Latino and Other Race groups also have the highest rates of Persons without Health Insurance, compared to other races/ethnicities in the region.

Finally, White (Non-Hispanic), Two or More Races, and American Indian/Alaska Native populations are disproportionately impacted across measures of public transportation (Table 1).

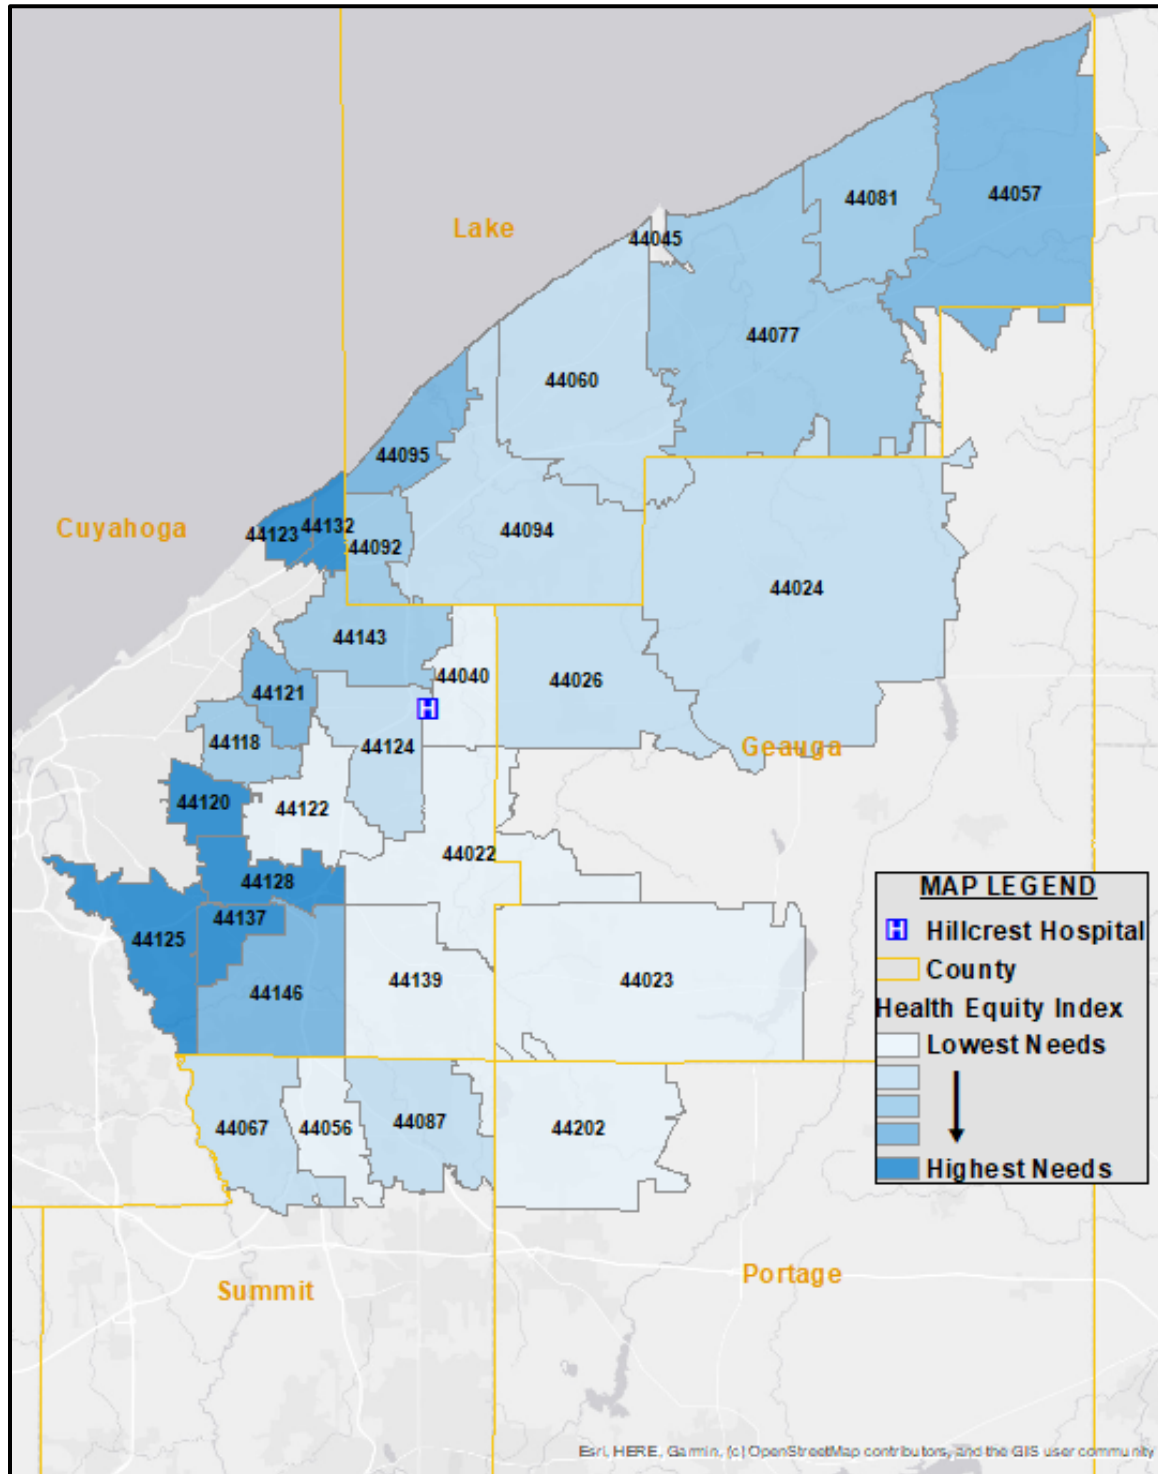

Geographic Disparities

In addition to disparities by race, ethnicity, gender, and age, this assessment also identified specific zip codes/municipalities with differences in outcomes related to health and social determinants of health. Geographic disparities were identified using the Health Equity Index, Food Insecurity Index, and Mental Health Index. These indices have been developed by Conduent Healthy Communities Institute to easily identify areas of high socioeconomic need, food insecurity and poor mental health. For all indices, counties, zip codes, and census tracts with a population over 300 are assigned index values ranging from 0 to 100, with higher values indicating greater need. Understanding where there are communities with higher need is critical to targeting prevention and outreach activities.

Health Equity Index

Conduent's Health Equity Index (HEI) estimates areas of high socioeconomic need, which are correlated with poor health outcomes. Zip codes are ranked based on their index value to identify relative levels of need, as illustrated by the map in Figure 21. The following zip codes in the Hillcrest Hospital Community had the highest level of socioeconomic need (as indicated by the darkest shades of blue): 44120, 44123, 44125, 44128, 44132, and 44137 in Cuyahoga County. Appendix A provides the index values for each zip code.

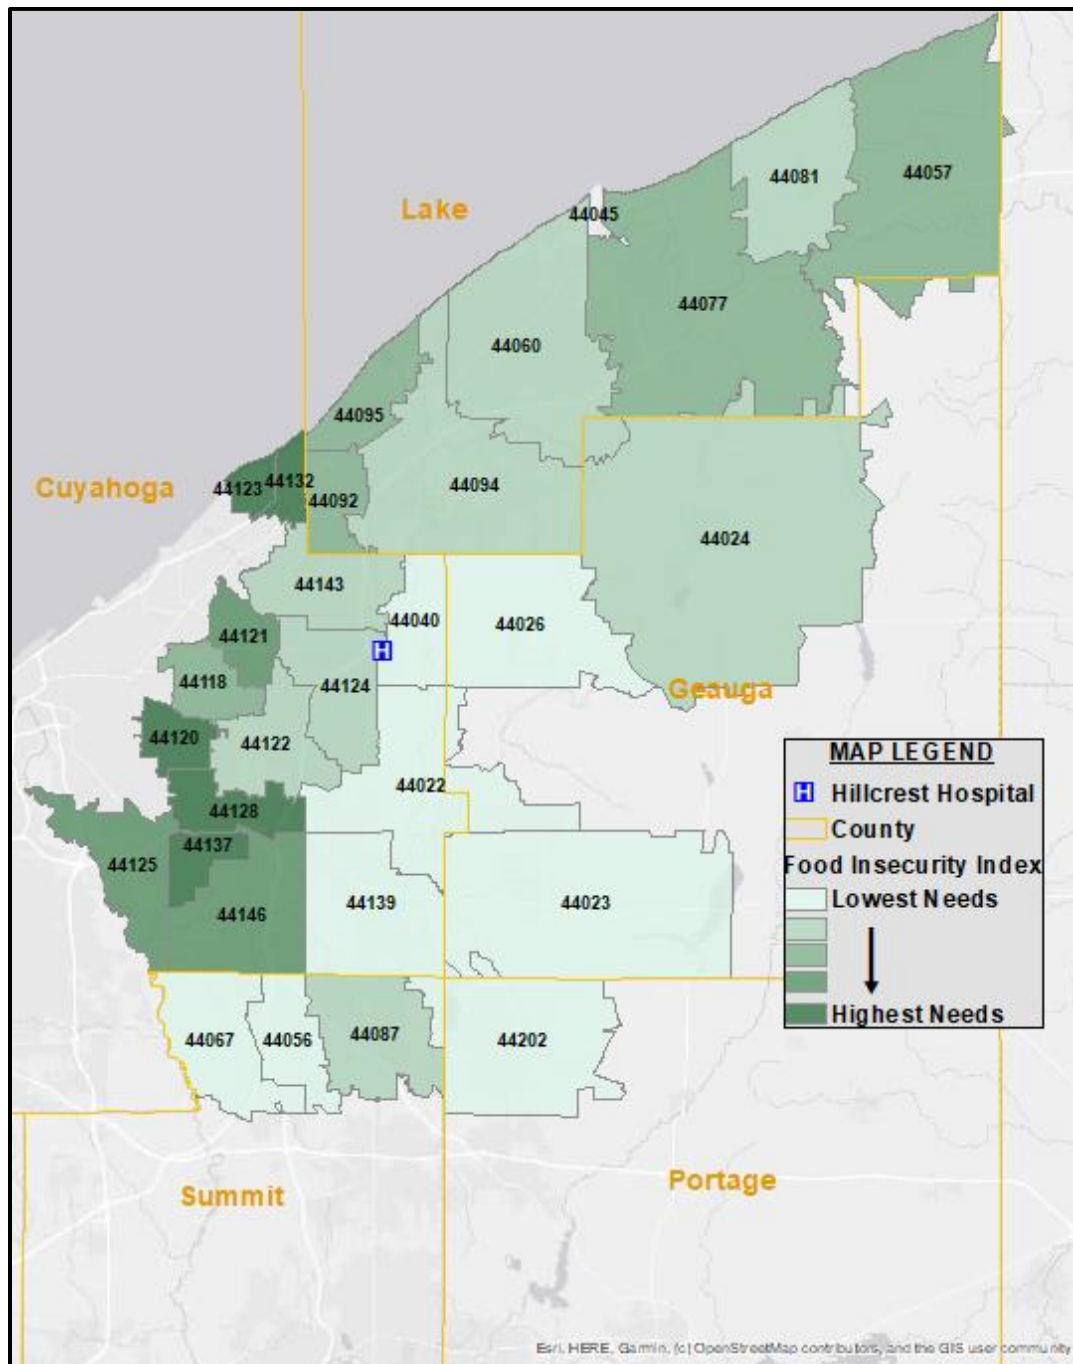

Figure 21: Health Equity Index

Food Insecurity Index

Conduent's Food Insecurity Index (FII) estimates areas of low food accessibility correlated with social and economic hardship. Zip codes are ranked based on their index value to identify relative levels of need, as illustrated by the map in Figure 22. The following zip codes had the highest level of food insecurity (as indicated by the darkest shades of green): 44120, 44123, 44128, 44132, and 44137 in Cuyahoga County. Appendix A provides the index values for each zip code.

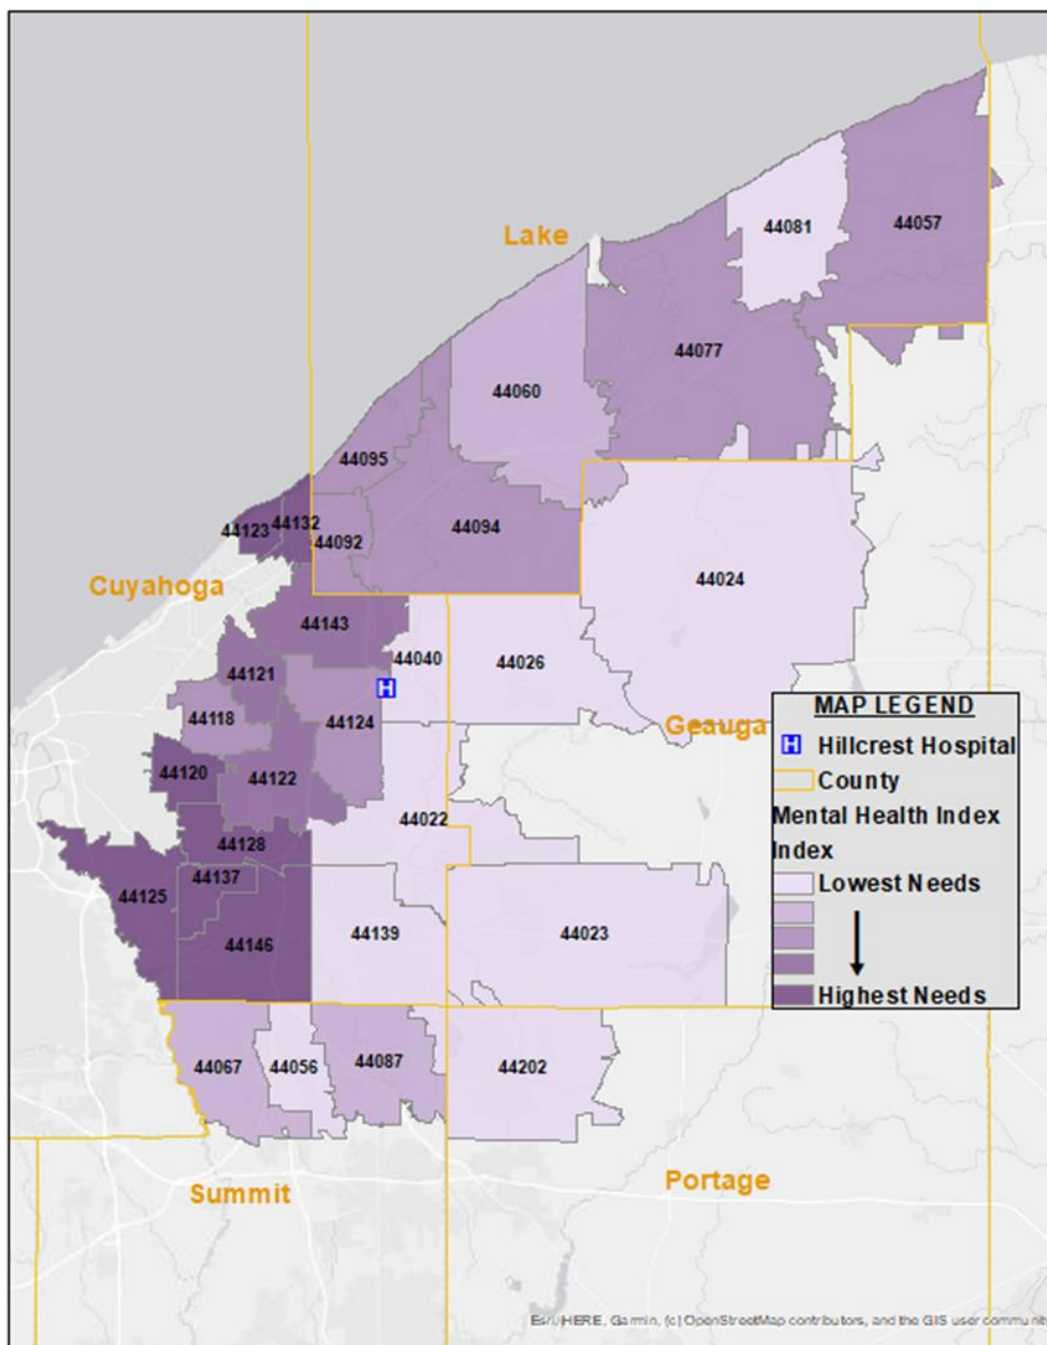

Figure 22: Food Insecurity Index

Mental Health Index

Conduent's Mental Health Index (MHI) is a measure of socioeconomic and health factors correlated with self-reported poor mental health. Zip codes were ranked based on their index value to identify the relative levels of need, as illustrated by the map in Figure 23. The following zip codes are estimated to have the highest need (as indicated by the darkest shades of purple): 44120, 44123, 44125, 44128, 44132, 44137, and 44146 in Cuyahoga County. Appendix A provides the index values for all zip codes within the Hillcrest Hospital Community.

Figure 23: Mental Health Index

Highlighted Demographics: COVID-19 Impacts Snapshot

On March 13, 2020, a U.S. national emergency was declared over the novel coronavirus outbreak first reported in the Wuhan Province of China in December 2019. Officially named COVID-19 by the World Health Organization (WHO) in February, WHO declared COVID-19 a pandemic on March 11, 2020. Later that month, stay-at-home orders were placed by the Ohio Governor and unemployment rates soared as companies were impacted and mass layoffs began.

At the time that the Hillcrest Hospital Community began its collaborative CHNA process, the community and the state of Ohio were in a period of the pandemic that was hoped to be in its final phases. Primary data was collected virtually to ensure the health and safety of those participating.

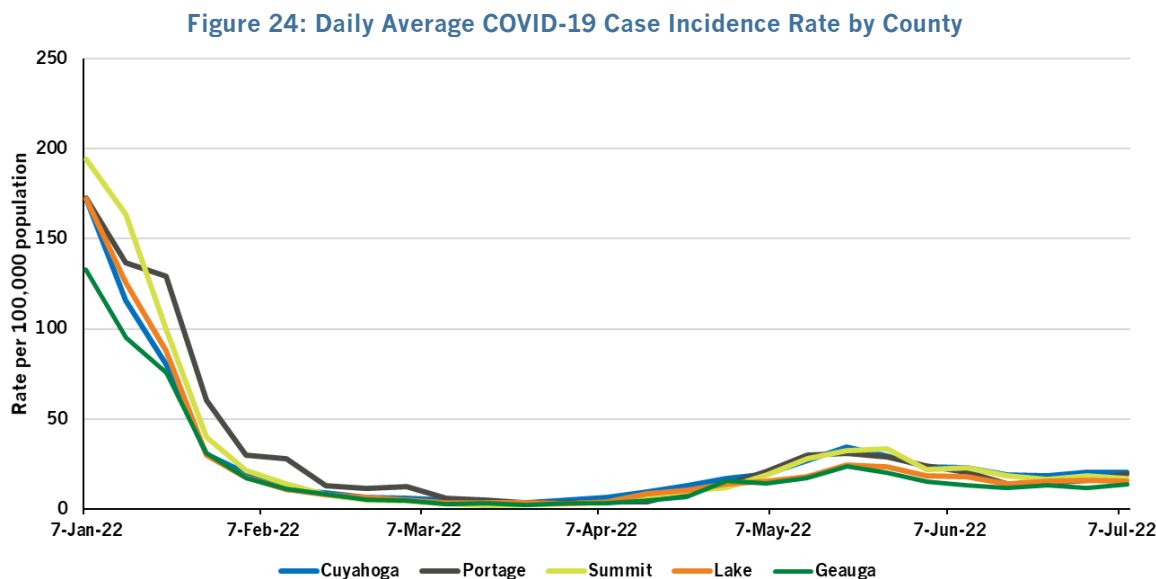

COVID-19 Pandemic

Community Input

Key stakeholder interviews and the Hillcrest Hospital Community Engagement Session served to assess the impact of the COVID-19 pandemic by asking respondents to describe how the pandemic has impacted community health outputs. Top responses focused on mental health challenges that spanned all age groups. Older adult health suffered both because of isolation borne of the fear of exposure to the COVID-19 virus, followed by sense of well-being, security, or hope, and social support/connection.

The COVID-19 Daily Average Case Incidence Rate by County

Figure 24 shows the daily average COVID-19 case incidence rate for Cuyahoga, Geauga, Lake, Portage, and Summit counties from January 2022 through early July 2022. As shown, the incidence rate has declined since the beginning of 2022, although some small spikes in incidence rates have occurred.

Vaccination Rates

As of June 2022, at least 57% of the population residing in counties within the Hillcrest Hospital Community Definition are fully vaccinated against COVID-19. Lake County has the highest vaccination rates (66.2%), followed by Cuyahoga County (65.5%), Summit County (64.0%), Geauga County (61.8%), and Portage County (57.8%).

Unemployment Rates

Unemployment rates rose between March and April 2020 for Cuyahoga, Geauga, Lake, Portage, and Summit counties when stay-at-home orders were first announced. Illustrated in Figure 25 below, as counties began slowly reopening some businesses in late-2020, the unemployment rate gradually began to go down. As of late 2021, unemployment rates have stabilized but still exceed pre-pandemic rates. When unemployment rates rise, there is a potential impact on health insurance coverage and healthcare access if jobs lost include employer-sponsored healthcare.

Figure 25: Unemployment Rate After the Start of the COVID-19 Pandemic

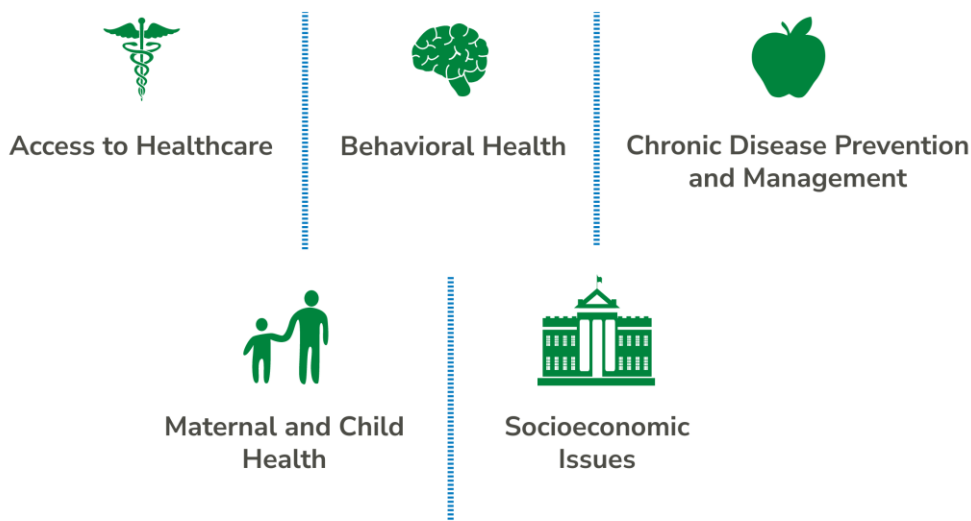

Synthesis and Prioritization

All forms of data may present strengths and limitations. Each data source used in this CHNA process was evaluated based on strengths and limitations and should be kept in mind when reviewing this report. Each health topic presented a varying scope and depth of quantitative data indicators and qualitative findings. For both quantitative and qualitative data, immense efforts were made to include as wide a range of secondary data indicators, community engagement session participants, and key stakeholders as possible. A full list of contributors can be found in the Primary Data Collection and Analysis description in [Appendix A](#).

To gain a comprehensive understanding of the significant health needs for the Hillcrest Hospital Community, the findings from all three data sets were compared and studied simultaneously. The secondary data scores, community engagement session themes, and key stakeholder responses were considered equally important in understanding the health issues of the community. The top health needs identified from each of these data sources were analyzed for areas of overlap. Six health issues were identified as significant health needs across all three data sources and were used for further prioritization. To ensure alignment with state and local health department objectives, a working group analyzed these significant health needs alongside the [Ohio State Health Improvement Plan \(SHIP\)](#) as well as the [Cuyahoga, Lake, Summit, Geauga and Portage County Community Health Improvement Plans \(CHIP\)](#) most recent findings. The prioritization process distilled the significant needs into five categories.

The five prioritized health needs are summarized in Figure 26. Each prioritized health topic includes the key findings from secondary data, the community engagement session discussions and key stakeholder interviews.

Figure 26: 2022 Prioritized Health Needs

Prioritized Health Topic #1: Access to Healthcare

Access to Healthcare

Secondary
Data Score: **1.40**

Key Themes from Community Input

- COVID-19 delayed preventative care and increased virtual visits putting care quality at risk and alienating populations without technical knowledge or access
- Expanded Medicaid access exposed gaps in knowledge or services navigation for low income and older adult populations
- Lack of financial investment in public health prevention as hospitals are focused on revenue which comes from specialty care, surgical care, etc.
- Lack of knowledge of healthy behaviors and health resources in the community
- Non-English speakers, people living in poverty, and those underinsured face barriers to accessing health care
- Racial disparities coupled with disparities based on income level dictate the quality of care received
- Transportation often a barrier to accessing health services centralized in hospitals and clinics

Warning Indicators

- Consumer Expenditures: Health Insurance
- Consumer Expenditures: Medical Services
- Consumer Expenditures: Medical Supplies
- Consumer Expenditures: Prescription and Non-Prescription Drugs
- Persons without Health Insurance
- Primary Care Provider Rate

Primary Data: Key Stakeholder Interviews and Community Engagement Session

Access to Health Care was described as a top health need by the Hillcrest Hospital Community Advisory Council members participating in the Community Engagement Session. Access, and access-related topics including transportation and resources, were described as among the top barriers to improving health.

Participants pointed to an increase in technology-based care platforms and difficulty community members experience around navigating new health system protocols for appointments as a key barrier to accessing healthcare. They recommended communicating resource availability on low or no-tech platforms to reach older adults. Additionally, trends for the older adult population toward aging in place and other behaviors that favor long-term independence, coupled with the tendency of older adults to avoid asking for help or knowing where and how to ask also served as barriers to accessing care. Finally, participants conveyed those older adults are also afraid to see a doctor because of consequences and limitations associated with poor overall health, memory, eye-sight and hearing.

Certainly the people who are living with Long COVID have very direct health care issues that they're dealing with. The pandemic has definitely led to significant delays in care early on, so a lot of that preventative stuff got pushed off and I don't think we've caught up with all that.

- Key Stakeholder

Key stakeholders noted a lack of investment in prevention practices including accessibility of primary services at a local level. Racial, economic, geographic, educational and environmental inequities all impact access to care and disproportionately affect communities of color. Three key themes surfaced from community discussions including systemic inequities in healthcare, the need to focus on preventative care, and barriers to healthcare.

Systemic inequities in healthcare included issues of discrimination and bias from providers which ultimately creates mistrust from communities experiencing this discrimination. Key informants suggested hiring providers that look like the people they are caring for, building a sustainable presence in the community, and ensuring providers are trained in trauma-informed care and gender-affirming care.

Preventative care included high utilization rates of the ER for minor health issues due to lack of primary care physician, and the need to strengthen the public health infrastructure. Furthermore, COVID-19 allowed for the expansion of telehealth which increased access to healthcare for many. However, it also exposed the inequities in broadband support due to infrastructure issues leaving residents unable to access telehealth.

Barriers to healthcare included transportation, navigating the difficulties of a fragmented healthcare system, ability to pay for services/insurance (lack of insurance, high co-pays/deductibles), and health literacy for providers to communicate with patients.

Secondary Data

From the secondary data scoring results, Health Care Access & Quality ranked as the 11th highest scoring health need, with a score of 1.40. Further analysis was done to identify specific indicators of concern. Those indicators with high data scores (scoring at or above the threshold of 1.50) were categorized as indicators of concern and can be found in Appendix C and are discussed below. In addition, the appendices also contain a description of methodology (Appendix A) and a full list of indicators with data scoring categorized within this topic area (Appendix C).

Consumer Expenditures: Medical Services is one of the worst performing indicators in Cuyahoga, Summit, Geauga and Lake counties. This indicator is defined as the average dollar amount per consumer unit spent on medical services (such as eye care, dental care,

physician, and non-physician care). A consumer unit is defined as a household or any person living in a college dormitory.

The average dollar amount per consumer unit spent on medical services for 2021 in Summit, Geauga, and Lake counties was \$1,153.10, \$1,678.50, and \$1,242.3, respectively. These values are higher than the average dollar amount spent on medical services in the state of Ohio, where that amount is \$1,098.60 dollars per consumer unit. For this indicator, Summit, Geauga, and Lake counties in the Hillcrest Hospital community fell in the worst 25% of all counties in the nation.

The average dollar amount per consumer unit for health insurance in Lake County is \$4,910.20. This is higher than the average dollar amount spent on health insurance in the state of Ohio, where that amount is \$4,371.70 dollars per consumer unit. A consumer unit is defined as a household or any person living in a college dormitory. Additionally, in Cuyahoga County, 89.8% of adults have health insurance, compared to 90.6% in the United States. People without health insurance may not be able to afford medical treatment or prescription drugs. They are also less likely to get routine checkups and screenings, so if they do become ill, they will not seek treatment until the condition is more advanced and therefore more difficult and costly to treat.²³ Many small businesses are unable to offer health insurance to employees due to rising health insurance premiums.²⁴

The rising costs of medical care and lack of insurance affects all races and ethnicities. However, in Cuyahoga County, people identifying as Hispanic/Latino and Some Other Race are disproportionately affected (see red in Figure 27 below).

Figure 27. Persons without Health Insurance by Race/Ethnicity in Cuyahoga County

Source: American Community Survey, 2019

²³ Kaiser Family Foundation, 2020 and 2015

²⁴ The Commonwealth Fund, 2019

Similarly, as seen in red in Figure 28, in Lake County, persons identifying as Hispanic/Latino are much more likely to be without health insurance (25.3%) compared to the overall population as seen in gray (5.9%).

Figure 28. Persons without Health Insurance by Race/Ethnicity in Lake County

Source: American Community Survey, 2019

Prioritized Health Topic #2: Behavioral Health

Behavioral Health: Mental Health

Secondary
Data Score: **1.34**

Key Themes from Community Input

- Closely linked with substance use as self-medication
- Housing insecurity especially for younger LGBT individuals leading to homelessness effects mental wellbeing
- Lack of robust mental health system
- Mental health issues worsened for LGBTQ+ population, children, college students, teens & teachers as a result of COVID-19 isolation
- Need to expand provider network as the justice system works to divert folks with low-level violations to treatment and mental health care
- Resources needed to help develop coping strategies & resilience from trained/supportive professionals
- Second leading cause of death in kids 10-14 is suicide
- Social isolation worsened during pandemic leading to a spike in reports of depression, anxiety, suicide attempts or death by suicide
- Transgender patients have a much higher risk of suicide due to discrimination, bigotry & isolation

Warning Indicators

- Alzheimer's Disease or Dementia: Medicare Population
- Depression: Medicare Population
- Poor Mental Health: 14+ Days
- Poor Mental Health: Average Number of Days

Primary Data: Key Stakeholder Interviews and Community Engagement Sessions (Mental Health)

Members of the Hillcrest Hospital Community Advisory Council, representing a range of organizations within the community, who attended the Community Engagement session ranked Mental Health the most important health problem in the community. They also reported a strong association between mental health and substance use suggesting that community members increasingly use and abuse alcohol, illicit drugs and prescription drugs as a form of self-medication to cope with stress. Further, attendees reported an increase in mental health concerns in both older adults and youth. Older adults experience greater isolation as a result of reduced mobility and fear of contracting diseases in public. Youth, on the other hand, are experiencing trauma, abuse, food and housing insecurities and other challenges that deeply affect their mental health.

We are seeing more frequent transports for evaluations. We see it in our young people. We see the effects of any variety of traumas that show up in our schools and you know, with with young people.

Whether it's influenced by types of abuse, food insecurity, housing insecurity or any of the other adverse experiences that can impact stress and cause mental anguish.

- Community Engagement Session Participant

Mental health resources, and the availability of mental health providers were frequently cited as disproportionate to community need. Overall, lack of mental health providers and resources, and navigation and/or knowledge about available services were all mentioned as barriers. Participants emphasized the need to examine the root causes leading to mental health issues within the community including poverty and an unequal playing field in terms of investment in education in low-income communities. Furthermore, LGBTQ+ community members experience disproportionate mental health issues. Stakeholders recommended an increase in meaningful investment in community health programming.

Secondary Data: Mental Health

From the secondary data scoring results, Mental Health & Mental Disorders had the 14th highest data score of all topic areas, with a score of 1.34. Further analysis was done to identify specific indicators of concern. Those indicators with high data scores (scoring at or above the threshold of 1.50) were categorized as indicators of concern and can be found in Appendix C and are discussed below. In addition, the appendices also contain a description of methodology (Appendix A) and a full list of indicators with data scoring categorized within this topic area (Appendix C).

According to the secondary data, depression, and Alzheimer's, specifically within the Medicare population, are areas of great concern. 21.8% and 21.4% of Medicare beneficiaries in Summit and Portage counties, respectively, have been treated for depression.

In Cuyahoga County, 11.4% of Medicare beneficiaries have been treated for Alzheimer's Disease or Dementia and 18.5% have been treated for depression. In Lake County, 19.2% of Medicare beneficiaries have been treated for depression. Over the past four years, both Lake and Cuyahoga counties have experienced an increase in Medicare beneficiaries receiving treatment for depression.

Disparities within the mental health topic area were also found for Hillcrest Hospital community counties. As seen in Figure 29, in Cuyahoga County, the Age-Adjusted Death Rate due to Suicide for males is 23.1 deaths per 100,000 population (see red below), compared to 5.9 deaths per 100,000 for females (see green below).

Figure 29. Age-Adjusted Death Rate due to Suicide by Gender in Cuyahoga County

Source: Centers for Disease Control and Prevention, 2017-2019

Lake County also faces gender disparities in suicide deaths. The Age-Adjusted Death Rate due to Suicide for males in Lake County is 22.7 deaths per 100,000 population (see red in Figure below), compared to 6.6% for females (see green in Figure 30 below)

Figure 30. Age-Adjusted Death Rate due to Suicide by Gender in Lake County

Source: Centers for Disease Control and Prevention, 2017-2019

Additionally, Summit County has a similar trend where there are 27.2 deaths due to suicide per 100,000 males, and 5.9 deaths per 100,000 females. This is shown in Figure 31.

Figure 31. Age-Adjusted Death Rate due to Suicide by Gender in Summit County

Source: Centers for Disease Control and Prevention, 2017-2019

Substance Use

Behavioral Health: Substance Use

Secondary
Data Score: **1.57**

Key Themes from Community Input

- Addiction as “self-medication” an outcome of mental health challenges
- Lack of providers/treatment sites to meet the needs of those with substance use disorder
- Overall increases in alcohol intake and drug use (opiates) during COVID-19
- Substance abuse treatment was one of the places hit hardest during COVID due to difficulties moving to a virtual visit system (so much of the recovery from substance use disorder is about relationships and being connected)

Warning Indicators

- Adults who Binge Drink
- Adults who Drink Excessively
- Age-Adjusted Drug and Opioid-Involved Overdose Death Rate
- Alcohol-Impaired Driving Deaths
- Consumer Expenditures: Alcoholic Beverages
- Death Rate due to Drug Poisoning

Primary Data: Key Stakeholder Interviews and Community Engagement Sessions (Substance Use)

Members of the Hillcrest Hospital Community Advisory Council attending the Community Engagement session ranked Alcohol and Drug Use the third most important health problem in the community. They described addiction as an outcome of mental health challenges and mental disorders wherein substances are used as a means of easing stress. Emergency responders participating in the session suggested that increased use of

Narcan may be limiting reports of community substance abuse rates. Additionally, community members lack understanding of how to navigate to services that help address drug addiction. To begin addressing this and other health challenges in the community, session participants recommended that organizations develop partnerships to leverage resources between hospital providers and community services and then communicate those resources to community members, particularly older adults without technology access to resources.

“ I think as people became more familiar with Narcan and the availability of Narcan generally increases, I think that has reduced the number of interactions that emergency responders have with people who are overdosing or using so the overall reduction in numbers of people abusing substances could be artificially low. ”

- Community Engagement Session Participant

Key stakeholders noted an overall increase in alcohol intake and opioid use during the COVID-19 pandemic. They asserted that there was a lack of space in treatment sites and low access to outpatient provider services to meet the needs of those suffering from substance use disorder further exacerbating a worsening issue.

“ I think substance abuse treatment is one of the places hit the hardest during COVID and really had a difficult time moving to a virtual kind of visit system, because so much of the recovery from substance use disorder is about relationships and being connected. ”

- Key Stakeholder

Secondary Data

From the secondary data scoring results, Alcohol & Drug Use had the third highest data score of all topic areas, with a score of 1.57. Further analysis was done to identify specific indicators of concern. Those indicators with high data scores (scoring at or above the threshold of 1.50) were categorized as indicators of concern and can be found in Appendix C and are discussed below. In addition, the appendices also contain a description of methodology (Appendix A) and a full list of indicators with data scoring categorized within this topic area (Appendix C).

In Cuyahoga County in 2017-2019, there were 42.6 deaths due to drug poisoning per 100,000 people, which is higher than both the state and national values, and in the worst quartile (25%) of counties in the U.S.

Consumer expenditures related to alcoholic beverages in Geauga County average \$962.6, much higher than the Ohio state value (\$651.50) and U.S. value (\$701.90).

Gender disparities within drug and opioid-involved overdose death rates have shown to be prominent in Lake and Summit counties. In both counties, males have higher rates of death involving overdoses than their female counterparts, as shown in Figures 32 and 33.

Figure 32. Age-Adjusted Drug and Opioid-Involved Overdose Death Rate by Gender in Lake County

Source:Centers for Disease Control and Prevention, 2017-2019

Figure 33. Age-Adjusted Drug and Opioid-Involved Overdose Death Rate by Gender in Summit County

Source:Centers for Disease Control and Prevention, 2017-2019

Prioritized Health Topic #3: Chronic Disease Prevention and Management

Chronic Disease Prevention and Management is a health topic that is analyzed from four secondary data topics – Nutrition and Healthy Eating, Chronic Diseases, Older Adult Health and Cancer. An overview snapshot of each of these subtopics is provided below.

Primary Data: Key Stakeholder Interviews and Community Engagement Session

OLDER ADULT HEALTH

Older Adult Health & Other Conditions

Secondary Data Score: **1.50** (Older Adults)
1.64 (Other Conditions)

Key Themes from Community Input

- Affordable assisted living facilities in familiar neighborhoods are scarce
- Aging at home brings increased care requirements and isolation
- COVID-19 was a disruptor of programs for older adults leading to more social isolation
 - Increased reports of depression, anxiety, suicide attempt, death by suicide
 - Some people with dementia progressed to Alzheimer's
- Difficulties navigating health care system due to lack of broadband access/computer knowledge
- Lower income older adults disproportionately affected by chronic conditions, access to healthy food, poor housing conditions
- Mass vaccination sites were difficult for non-English speaking older adults to navigate (language barriers) and those not technologically savvy
- Social cohesion & connectedness:
 - Isolation in LGBTQ+ elderly patients because they come from a generation where they may have been rejected by family members, may have lost loved ones
 - Wasn't common for LGBT folks to have families, so they're really alone
 - Isolation is an independent risk factor for adverse outcomes

Warning Indicators

- Adults with Arthritis
- Alzheimer's Disease or Dementia: Medicare Population
- Asthma: Medicare Population
- Atrial Fibrillation: Medicare Population
- Cancer: Medicare Population
- Chronic Kidney Disease: Medicare Population
- Colon Cancer Screening
- Depression: Medicare Population
- Hyperlipidemia: Medicare Population
- Osteoporosis: Medicare Population
- People 65+ Living Alone
- People 65+ with Low Access to a Grocery Store
- Rheumatoid Arthritis or Osteoarthritis: Medicare Population

Community Engagement Session conversations described older adults increasing propensity to age in place to avoid contracting COVID-19, as was prevalent during the most intense transmission periods of the pandemic. Aging at home, however, is accompanied by an increase in care requirements and isolation of the elderly negatively impacting population independence and mental health. Specific concerns surrounded older adult ability to pay for the rising costs and demands for their medications and prescriptions with some participants worrying that older adults would need to choose between purchasing food or medications. Attendees of the session ranked older adults the

most underserved population followed by low-income and Black/African American community members.

One of the things I think we see often is the elderly, in terms of mental health, whether they're able to take their medications appropriately or eat appropriately. We have a lot of elderly people that live at home alone and are isolated.

- Community Engagement Session Participant

Key stakeholders focused on lower income older adults who are disproportionately affected by chronic conditions, access to healthy food and poor housing conditions—supporting the conclusions drawn and assertions made during the Hillcrest Hospital Community Engagement Session. Furthermore, difficulties navigating telehealth services as well as arranging in-person visits are attributed to lack of broadband access or lack of comfort with technologies required to access services like smart phones, computers, and tablet devices in the older adult population. A main theme that arose in regard to older adult health was social cohesion and connectedness, especially amongst LGBTQ+ elderly patients that already experience isolation as a result of discrimination from their family and society.

I think one of the challenges on the healthcare side of the equation is that it is not about the quality of the care that's available, it is about a population that for many people has had no experience being a healthcare consumer. And so at least one of the challenges for folks is they have no history of accessing the system. If they get a prescription written, do they know how to get it filled? Do they know how to navigate the system to get to the pharmacy again?

- Key Stakeholder

Secondary Data

According to the secondary data results, Older Adult Health topic area had the sixth highest score at 1.50 and the related Other Conditions health topic ranked second with a score of 1.64. All topic areas in this group demonstrate need per as they each scored above 1.5. Those indicators with high data scores (scoring at or above the threshold of 1.50) were categorized as indicators of concern and can be found in Appendix C and are discussed below. In addition, the appendices also contain a description of methodology

(Appendix A) and a full list of indicators with data scoring categorized within this topic area (Appendix C).

In Lake County, the Age-Adjusted Death Rate due to Falls and Osteoporosis: Medicare Population were the worst performing indicators, both scoring a 2.92 out of a possible 3.00.

Disparities also exist within the Hillcrest Hospital Community Definition and Chronic Diseases. Black/African American residents in Cuyahoga County experience worse rates of Age-Adjusted Death Rate due to Kidney Disease than their White peers. Figure 34 shows Black/African Americans in Cuyahoga County have a death rate due to Kidney Disease of 26.2 deaths per 100,000 population compared to the overall rate of 15.2.

Figure 34. Age-Adjusted Death Rate due to Kidney Disease by Race/Ethnicity in Cuyahoga County

Source: Centers for Disease Control and Prevention, 2017-2019

Prioritized Health Topic #4: Maternal and Child Health

Maternal & Child Health

Secondary Data Score: 1.36

Key Themes from Community Input

- All issues are disproportionately impacting poor children
- Many AAPI (Asian American and Pacific Islander) families made the decision that their kids were safer at home, not necessarily from COVID-19, but from physical, anti-Asian hostilities. So, they kept their kids at home and that's devastating because engagement in learning is extremely difficult in that remote setting
- Opportunity for payer community to pay for food for pregnant people experiencing food insecurity to have better pregnancy outcomes
- Red lined communities are also most impacted by lead and infant mortality
- Rising behavioral health issues amongst children which was exacerbated by COVID-19
- Specialized resources need to be allocated to communities most impacted by infant mortality, prematurity, early pregnancy loss which in Cleveland, is African American families to promote true health equity
- There needs to be more intentional funding of maternal/infant health programs in the community from the hospital using an equity lens
- Top issues: lead poisoning, mental/behavioral health, infant mortality, food insecurity, delays in preventative care, learning loss

Warning Indicators

- Age-Adjusted Death Rate due to Breast Cancer
- Breast Cancer Incidence Rate
- Children with Low Access to a Grocery Store
- Consumer Expenditures: Childcare

Primary Data: Key Stakeholder Interviews

Maternal and Child Health has dominated community discussions for multiple assessment cycles. High maternal and infant mortality rates across communities served by enterprise hospitals have been of particular concern. Implementation strategies precipitated investments in community health focused on reducing maternal and infant mortality.

Key stakeholder interviews acknowledged the persistence of high infant mortality rates as well as the continuance of lead poisoning as a contributor to poor children's health outcomes. During the COVID-19 pandemic, long periods time spent indoors increased exposures and worsened lead related incidents and outcomes. Children across the service area suffered some learning loss during the pandemic as classrooms went remote and parents were often unable to provide time away from work to attend to their child's educational needs. Parents identifying as Asian American and Pacific Islander (AAPI) reportedly opted to continue with remote options even after in-person learning resumed for fear of anti-Asian sentiment being expressed to their children by classmates. Related to learning loss and pandemic associated isolation, mental and behavioral health,

including substance abuse has challenged children at increasingly younger ages. Isolation also kept parents from seeking primary care services for their children, including immunizations and well visits. Stakeholders considered nutrition for low-income families a key concern with risks to childhood obesity and juvenile diabetes as early life precursors to chronic diseases top of mind. Additionally, key stakeholders spoke about food insecurity amongst pregnant people, and the advocacy opportunity for the payer community to provide food for at risk pregnant people experiencing food insecurity. Finally, key stakeholders expressed disparities among low-income children that exacerbated nearly all health outcomes discussed.

Secondary Data

Maternal and Child Health came up as areas of concern in the secondary data analysis. Among all health topics, Children's Health ranked tenth with a score of 1.42 and Maternal, Fetal and Infant Health ranked 12th with a score of 1.36. Women's Health ranked fifth with a score of 1.52. Further analysis was done to identify specific indicators of concern. Those indicators with high data scores (scoring at or above the threshold of 1.50) were categorized as indicators of concern and can be found in Appendix C and are discussed below. In addition, the appendices also contain a description of methodology (Appendix A) and a full list of indicators with data scoring categorized within this topic area (Appendix C).

Consumer Expenditures: Childcare came up as an indicator of concern for almost every county in the Hillcrest Hospital community (Lake, Summit, Geauga and Portage). Residents in Geauga County spend an average of \$443.40 per consumer unit on childcare and in Lake County, residents spend an average of \$315 per consumer unit. A consumer unit is defined as a household or any person living in a college dormitory. This data captures childcare, day care, nursery school, preschool, and non-institutional day camps. ²⁵Childcare is a major household expense for families with young children. Access to affordable and high-quality childcare is essential for parents to be able to provide sufficient income for their family while ensuring all their children's social and educational needs are met. In regions where childcare costs are high, family budgets are strained, and parents may be forced to sacrifice the quality of childcare arrangements they select for their children. ²⁶

Babies with Low Birth Weight and Babies with Very Low Birth Weight are the worst performing indicators in both Cuyahoga and Summit counties. In Summit County, 9.4% of newborns weighed less than 2,500 grams (5 pounds, 8 ounces) and 1.7% of newborns weighed less than 1,500 grams (3 pounds, 5 ounces). In Cuyahoga County, 10.8% of newborns weighed less than 2,500 grams (5 pounds, 8 ounces) and 1.7% of newborns weighed less than 1,500 grams (3 pounds, 5 ounces). In both counties and instances, the county rates are higher than the state of Ohio where 8.5% of babies are categorized as having a low birth weight and 1.4% have a very low birth weight (1,500 grams or less).

Additionally, Black/African American residents in Cuyahoga County see a higher rate of Babies with Very Low Birth Weight, as shown in Figure 35 where 3.10% of babies weigh less than 1,500 grams.

Prioritized Health Topic #5: Socioeconomic Issues

Prevention and Safety

Secondary
Data Score:

1.52

Key Themes from Community Input

- Food insecurity increased with unemployment during the pandemic
- Generational poverty, poor housing and lack of resources available to create healthy conditions for people to live, work, and play in
- Gun violence was a top community concern
- People without safe and affordable housing are an underserved population

Warning Indicators

- Adults with Current Asthma
- Age-Adjusted Death Rate due to Unintentional Injuries
- Age-Adjusted Death Rate due to Unintentional Poisonings
- Annual Ozone Air Quality
- Asthma: Medicare Population
- Children with Low Access to a Grocery Store
- Death Rate due to Drug Poisoning
- Farmers Market Density
- Fast Food Restaurant Density
- Grocery Store Density
- Low-Income and Low Access to a Grocery Store
- People 65+ with Low Access to a Grocery Store
- Physical Environment Ranking
- SNAP Certified Stores
- WIC Certified Stores

Primary Data: Key Stakeholder Interviews

Key stakeholders couched discussions around specific health needs in the context of generational poverty, poor housing and historical red lining. Generally, there is a lack of resources individually and as a community to create healthy conditions for people to live, work and play. Finally, transgender patients have higher rates of victimization and murder.

The biggest disparities that we are working on right now are infant mortality, lead poisoning, community violence and behavioral health. There is inequity imbedded into our economic and educational system that so greatly impact health outcomes.

- Key Stakeholder

Secondary Data

Prevention & Safety ranked fourth among all health topics with a score of 1.52. Further analysis was done to identify specific indicators of concern. Those indicators with high data scores (scoring at or above the threshold of 1.50) were categorized as indicators of concern and can be found in Appendix C and are discussed below. In addition, the

appendices also contain a description of methodology (Appendix A) and a full list of indicators with data scoring categorized within this topic area (Appendix C).

Death Rate due to Drug Poisoning ranked highest in this topic area for Cuyahoga County with a death rate of 42.6 deaths per 100,000 population, compared to Ohio's rate of 38.1 and the U.S. rate of 21.0. This indicator is also increasing significantly in Cuyahoga County.

Additionally, disparities were identified in this topic area for both Cuyahoga and Summit counties and are shown below.

In Cuyahoga County, disparities exist for males in the following indicators: Age-Adjusted Death Rate due to Falls, Age-Adjusted Death Rate due to Unintentional Poisonings, and Age-Adjusted Death Rate due to Unintentional Injuries as seen in Figures 36, 37 and 38.

Figure 38. Age-Adjusted Death Rate due to Unintentional Injuries by Gender in Cuyahoga County

Source: Centers for Disease Control and Prevention, 2017-2019

Similarly, males in Summit and Lake counties also have higher values of age-adjusted death rates due to unintentional poisonings and injuries as seen in Figures 39, 40, 41 and 42.

2022 Hillcrest Hospital CHNA Alignment

The final prioritized health needs from this 2022 Hillcrest Hospital CHNA are in alignment with some of the top priorities and factors influencing health outcomes from the 2019 Ohio State Health Assessment/State Health Improvement Plan. They continue alignment with the 2019 Hillcrest CHNA priority areas. The check mark icon in Figure 43 indicates areas of alignment.

Appendices Summary

A. Methodology

An overview of methods used to collect and analyze data from both secondary and primary sources.

B. Impact Evaluation

A detailed overview of progress made on the 2019 Implementation Strategy planning, development and roll-out as well as email and web contacts for more information on the 2022 CHNA.

C. Secondary Data Methodology and Scoring Tables

A detailed overview of the Conduent HCI data scoring methodology and indicator scoring results from the secondary data analysis.

D. Community Input Assessment Tools

Quantitative and qualitative community feedback data collection tools, stakeholders and organizations that were vital in capturing community feedback during this collaborative CHNA:

- Community Engagement Session Questions
- Key Stakeholder Interview Questions
- Key Stakeholder and Community Organizations

E. Community Partners and Resources

The tables in this section acknowledge community partners and organizations who supported the CHNA process.

F. Acknowledgements

Appendix A: Methodology

Overview

Primary and secondary data were collected and analyzed to inform the 2022 CHNA. Primary data consisted of community engagement session discussions and key stakeholder interviews. The secondary data included indicators of health outcomes, health behaviors and social determinants of health. The methods used to analyze each type of data are outlined below. This analysis was conducted at the county-level and included data for Cuyahoga, Geauga, Lake, Portage, and Summit counties. The findings from each data source were then synthesized and organized by health topic to present a comprehensive overview of health needs in the Hillcrest Hospital Community.

Secondary Data Sources & Analysis

The main source for the secondary data, or data that have been previously collected, is the community indicator database maintained by Conduent Healthy Communities Institute. The following is a list of both local and national sources used in the Hillcrest Hospital Community Health Needs Assessment:

- American Community Survey
- American Lung Association
- Annie E. Casey Foundation
- CDC - PLACES
- Centers for Disease Control and Prevention
- Centers for Medicare & Medicaid Services
- Claritas Consumer Buying Power
- Claritas Consumer Profiles
- County Health Rankings
- Feeding America
- Healthy Communities Institute
- National Cancer Institute
- National Center for Education Statistics
- National Environmental Public Health Tracking Network
- Ohio Department of Education
- Ohio Department of Health, Infectious Diseases
- Ohio Department of Health, Vital Statistics

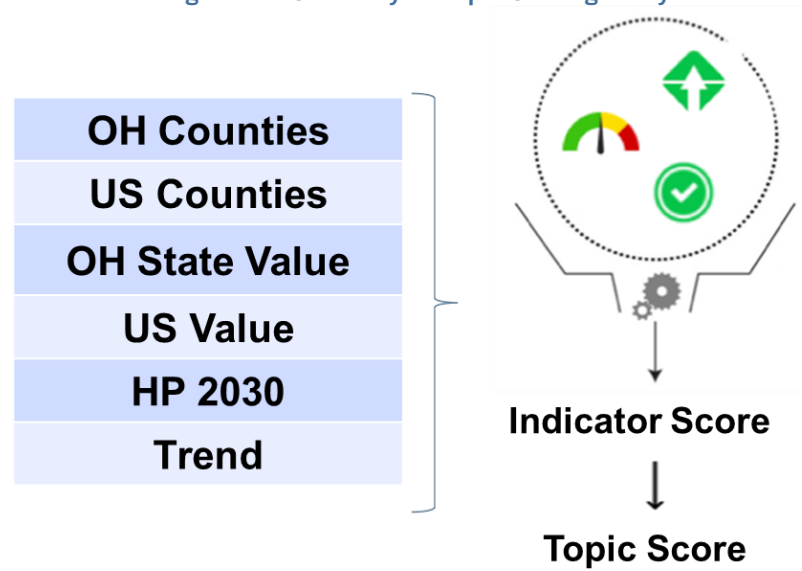

- Ohio Department of Public Safety, Office of Criminal Justice Services
- Ohio Public Health Information Warehouse
- Ohio Secretary of State
- U.S. Bureau of Labor Statistics
- U.S. Census - County Business Patterns
- U.S. Department of Agriculture - Food Environment Atlas
- U.S. Environmental Protection Agency
- United For ALICE

Secondary data used for this assessment were collected and analyzed from HCI's community indicator database. This database, maintained by researchers and analysts at HCI, includes 300 community indicators from at least 25 state and national data sources. HCI carefully evaluates sources based on the following three criteria: the source has a validated methodology for data collection and analysis; the source has scheduled, regular publication of findings; and the source has data values for small geographic areas or populations.

Secondary Data Scoring

HCI's Data Scoring Tool (Figure 44) was used to systematically summarize multiple comparisons in order to rank indicators based on highest need. This analysis was completed at the county level. For each indicator, the community value was compared to a distribution of Ohio and US counties, state and national values, Healthy People 2030, and significant trends were noted. These comparison scores range from 0-3, where 0 indicates the best outcome and 3 the worst. Availability of each type of comparison varies by indicator and is dependent upon the data source, comparability with data collected for other communities and changes in methodology over time. The comparison scores were summarized for each indicator, and indicators were then grouped into topic areas for a systematic ranking of community health needs.

Figure 44: Summary of Topic Scoring Analysis

Secondary Data Scoring

Data scoring is done in three stages:

Each indicator available is assigned a score based on its comparison to other communities, whether health targets have been met, and the trend of the indicator value over time. These comparison scores range from 0-3, where 0 indicates the best outcome and 3 the worst. Availability of each type of comparison varies by indicator and is dependent upon the data source, comparability with data collected for other communities and changes in methodology over time. Indicators are categorized into topic areas and each topic area receives a score. Indicators may be categorized in more than one topic area. Topic scores are determined by the comparisons of all indicators within the topic. This process was completed separately for the three counties within the Hillcrest Hospital Community: Cuyahoga, Geauga, Lake, Portage, and Summit counties. To calculate the overall highest needs topic area scores, an average was taken for each topic area across counties. Each county's values were weighted the same. More details about topics scores and the average score for the Hillcrest Hospital Community, see Appendix C.

Comparison to a Distribution of County Values: Within State and Nation

For ease of interpretation and analysis, indicator data on the Community Dashboard is visually represented as a green-yellow-red gauge showing how the community is faring against a distribution of counties in the state or the United States. A distribution is created by taking all county values within the state or nation, ordering them from low to high, and dividing them into three groups (green, yellow, red) based on their order. Indicators with the poorest comparisons ("in the red") scored high, whereas indicators with good comparisons ("in the green") scored low.

Comparison to Values: State, National, and Targets

Each county is compared to the state value, the national value, and target values. Target values include the nation-wide Healthy People 2030 (HP2030) goals. Healthy People 2030 goals are national objectives for improving the health of the nation set by the Department of Health and Human Services' Healthy People Initiative. For all value comparisons, the scoring depends on whether the county value is better or worse than the comparison value, as well as how close the county value is to the target value.

Trend over Time

The Mann-Kendall statistical test for trend was used to assess whether the county value is increasing over time or decreasing over time, and whether the trend is statistically significant. The trend comparison uses the four most recent comparable values for the county, and statistical significance is determined at the 90% confidence level. For each indicator with values available for four time periods, scoring was determined by direction of the trend and statistical significance.

Missing Values

Indicator scores are calculated using the comparison scores, availability of which depends on the data source. If the comparison type is possible for an adequate proportion of indicators on the community dashboard, it will be included in the indicator score. After exclusion of comparison types with inadequate availability, all missing comparisons are substituted with

a neutral score for the purposes of calculating the indicator's weighted average. When information is unknown due to lack of comparable data, the neutral value assumes that the missing comparison score is neither good nor bad.

Indicator Scoring

Indicator scores are calculated as a weighted average of all included comparison scores. If none of the included comparison types are possible for an indicator, no score is calculated, and the indicator is excluded from the data scoring results. A full list of indicators and their scores can be seen in Appendix C.

Topic Scoring

Indicator scores are averaged by topic area to calculate topic scores. Each indicator may be included in up to three topic areas if appropriate. Resulting scores range from 0-3, where a higher score indicates a greater level of need as evidenced by the data. A topic score is only calculated if it includes at least three indicators.

Examples of the health and quality of life topic areas available through this analysis are described as follows:

Quality of Life	Health	
Community	Adolescent Health	Older Adults
Economy	Alcohol & Drug Use	Oral Health
Education	Cancer	Other Conditions
Environmental Health	Children's Health	Prevention & Safety
	Diabetes	Physical Activity
	Health Care Access and Quality	Respiratory Diseases
	Heart Disease & Stroke	Sexually Transmitted Infections
	Immunization & Infectious Diseases	Tobacco Use
	Maternal, Fetal & Infant Health	Women's Health
	Medications & Prescriptions	Wellness & Lifestyle
	Mental Health & Mental Disorders	Weight Status
	Nutrition & Healthy Eating	

Table 2 shows the health and quality of life topic scoring results for the Hillcrest Hospital Community, ranked in order of highest need. Medications & Prescriptions scored as the poorest performing topic area with a score of 2.12, followed by Other Conditions with a score of 1.64. Topics that received a score of 1.50 or higher were considered a significant health need. Nine topics scored at or above the threshold. Topic areas with fewer than three indicators were considered a data gap.

Table 2: Top Secondary Data Health Needs

Older Adults
Cancer

Index of Disparity

An important part of the CHNA process is to identify health disparities, the needs of vulnerable populations and unmet health needs or gaps in services. There were several ways in which subpopulation disparities were examined by county. For secondary data health indicators, the Index of Disparity tool was utilized to see if there were large, negative, and concerning differences in indicator values between each subgroup data value and the overall county value. The Index of Disparity was run for each county, and the indicators with the highest race or ethnicity index value were found.

Health Equity Index

Every community can be described by various social and economic factors that can contribute to disparities in health outcomes. Conduent HCI's Health Equity Index (formerly SocioNeeds Index) considers validated indicators related to income, employment, education, and household environment to identify areas at highest risk for experiencing health inequities.

How is the index value calculated?

The national index value (ranging from 0 to 100) is calculated for each zip code, census tract, and county in the U.S. Communities with the highest index values are estimated to have the highest socioeconomic needs correlated with preventable hospitalizations and premature death.

What do the ranks and colors mean?

Ranks and colors help to identify the relative level of need within a community or service area. The national index value for each location is compared to all other similar locations within the community area to assign a relative rank (from 1 to 5) locally. These ranks are used to color the map and chart for the Health Equity Index, with darker coloring associated with higher relative need.

Food Insecurity Index

Every community can be described by various health, social, and economic factors that can contribute to disparities in outcomes and opportunities to thrive. Conduent HCI's Food Insecurity Index considers validated indicators related to income, household environment and well-being to identify areas at highest risk for experiencing food insecurity.

How is the index value calculated?

The national index value (ranging from 0 to 100) is calculated for each zip code, census tract, and county in the U.S. Communities with the highest index values are estimated to have the highest food insecurity, which is correlated with household and community measures of food-related financial stress such as Medicaid and SNAP enrollment.

What do the ranks and colors mean?

Ranks and colors help to identify the relative level of need within a community or service area. The national index value for each location is compared to all other similar locations within the community area to assign a relative rank (from 1 to 5) locally. These ranks are used to color the map and chart for the Food Insecurity Index, with darker coloring associated with higher relative need.

Mental Health Index

Every community can be described by various health, social, and economic factors that can contribute to disparities in mental health outcomes. Conduent HCI's Mental Health Index considers validated indicators related to access to care, physical health status, transportation, employment and household environment to identify areas at highest risk for experiencing poor mental health.

How is the index value calculated?

The national index value (ranging from 0 to 100) is calculated for each zip code, census tract, and county in the U.S. Communities with the highest index values are estimated to have the highest socioeconomic and health needs correlated with self-reported poor mental health.

What do the ranks and colors mean?

Ranks and colors help to identify the relative level of need within a community or service area. The national index value for each location is compared to all other similar locations within the community area to assign a relative rank (from 1 to 5) locally. These ranks are used to color the map and chart for the Mental Health Index, with darker coloring associated with higher relative need.

Table 3 below lists each zip code within the Hillcrest Hospital Community and their respective HEI, FII, and MHI values.

Table 3: HEI, FII and MHI Values for Zip codes within the Hillcrest Hospital Community

Zip Code	HEI Value	FII Value	MHI Value
44004	90.1	85.3	95.3
44022	1.1	2	38.9
44023	2.4	3	31.3
44024	11	17.8	32.5
44026	9.5	6.4	28.4
44040	0.9	0.4	7.9
44056	7.7	6.3	20.2
44057	37	40.6	71.9
44060	17.3	25	61.9
44067	11.4	10.7	53.9
44077	28.1	40.3	73.6
44081	25.4	19.5	36.4
44087	12.7	19.8	60.7
44092	32.1	45.4	75.2
44094	17	27.1	70.3
44095	42.7	43.5	75
44118	19.8	41.4	80.5
44120	84	88.4	99.2
44121	49.6	77.5	92.2
44122	7.8	24.1	87.9
44123	79.4	89.4	98.3
44124	13	18.5	80.3
44125	70.2	81.3	94.5
44128	92.8	96.1	99.7
44132	81.2	91.6	98.2
44137	82.8	86.2	97.7
44139	4.3	8.6	25.9

44143	20	25.4	89
44146	53.9	71.2	96.4
44202	6.5	5.9	39.9

Data Considerations

Several limitations of data should be considered when reviewing the findings presented in this report. Although the topics by which data are organized cover a wide range of health and health-related areas, data availability varies by health topic. Some topics contain a robust set of secondary data indicators, while others may have a limited number of indicators or limited subpopulations covered by those specific indicators.

Data scores represent the relative community health need according to the secondary data for each topic and should not be considered a comprehensive result on their own. In addition, these scores reflect the secondary data results for the population as a whole and do not represent the health or socioeconomic need that is much greater for some subpopulations. Moreover, many of the secondary data indicators included in the findings are collected by survey, and though specific methods are used to best represent the population at large, these measures are subject to instability, especially for smaller populations. The Index of Disparity is also limited by data availability, where indicator data varies based on the population groups and service areas being analyzed.

Race or Ethnic and Special Population Groupings

The secondary data presented in this report derive from multiple sources, which may present race and ethnicity data using dissimilar nomenclature. For consistency with data sources throughout the report, subpopulation data may use different terms to describe the same or similar groups of community members.

Zip Codes and Zip Code Tabulation Areas

This report presents both Zip Code and Zip Code Tabulation Area (ZCTA) data. Zip Codes, which were created by the U.S. Postal Service to improve mail delivery service, are not reported in this assessment as they may change, include P.O. boxes or cover large unpopulated areas. This assessment cover ZCTAs or Zip Code Tabulation Areas which were created by the U.S. Census Bureau and are generalized representations of Zip Codes that have been assigned to census blocks.

Demographics for this report are sourced from the United States Census Bureau, which presents ZCTA estimates. Tables and figures in the Demographics section of this report reference Zip Codes in title (for purposes of familiarity) but show values of ZCTAs. Data from other sources are labeled as such.

Primary Data Collection & Analysis

Primary data used in this assessment consisted of a community engagement session and key stakeholder interviews. These findings expanded upon the information gathered from the secondary data analysis.

Community Engagement Session Methodology and Results

Hillcrest Hospital invited members of the hospital Community Advisory Council (CAC) to participate in a community engagement session. The session was held virtually on June 22, 2022. Participants answered four questions including:

1. What are the most important health problems in the community?
2. What barriers or challenges to improving health exist in your community?
3. What community groups, populations, or neighborhoods are underserved?
4. What can be done to improve the health in your community?

At the end of the session, participants were also asked to describe interventions or programs they are aware of that have been successful in improving health in the community.

The project team captured detailed records of the discussion through transcripts and a polling tool (Poll Everywhere®). Figure 45 shows the results from analysis of inputs collected from these tools.

Figure 45: Community Engagement Session Findings

Top health issues	Barriers/Social Determinants of Health	Populations most impacted
<ul style="list-style-type: none"> • Mental Health • Older Adult Health • Substance Use 	<ul style="list-style-type: none"> • Older adult resource access--technology barriers, knowledge and navigation challenges, aging in place trends • Partnerships to develop and promote resources in the community--older adults 	<ul style="list-style-type: none"> • Low-income • Older Adults • African-American

Key Stakeholder Interviews Methodology and Results

The project team also captured detailed transcripts of the key stakeholder interviews. Table 4 describes the key stakeholder organizations contributing to the primary data collection process.

Table 4: Hillcrest Hospital Key Stakeholder Organizations

Key Stakeholder and Community Organizations	
<ul style="list-style-type: none"> • City of Cleveland Department of Public Health • Cuyahoga County Board of Health • Lorain County Public Health • Hillcrest Hospital Community Advisory Council 	<ul style="list-style-type: none"> • Neighborhood Family Practice • Birthing Beautiful Communities • Lead Safe Cleveland Coalition • Better Health Partnerships • NAMI Greater Cleveland • Asian Services in Action (ASIA) • Cleveland Clinic LGBTQ+ Care

	<ul style="list-style-type: none"> • Benjamin Rose Institute on Aging • Greater Cleveland Food Bank • The Gathering Place • Cuyahoga Metropolitan Housing Authority • Esperanza • The Centers for Families and Children
--	---

The transcripts were analyzed using the qualitative analysis program Dedoose 2®. Text was coded using a pre-designed codebook-organized by themes and analyzed for significant observations. Figure 46 shows key findings from community stakeholder interviews specific to the Hillcrest Hospital Community.

Figure 46: Key Stakeholder Findings

Findings from both the community engagement session and key stakeholder interview analyses were combined with findings from secondary data and incorporated into the Data Synthesis and Prioritized Health Needs.

Appendix B: Impact Evaluation

The CHNA process should be viewed as a three-year cycle to evaluate the impact of actions taken to address priority areas. This step affirms organizations focus and target efforts during the next CHNA cycle. The top health priorities for the Hillcrest Hospital Community from the 2019 CHNA were:

- Access to Affordable Healthcare
- Addiction and Mental Health
- Chronic Disease Prevention and Management
- Infant Mortality
- Socioeconomic Concerns
- Medical Research and Health Professions Education

Implementation strategies for these health topics shifted in response to the COVID-19 pandemic. Innovative strategies were adopted to continue building capacity for addressing the community health needs.

Actions Taken Since Previous CHNA

Hillcrest Hospital's previous Implementation Strategy Report (ISR) outlined a plan for addressing the following priorities identified in the 2019 CHNA: Addiction and Mental Health, Chronic Disease Prevention and Management, Infant Mortality, Socioeconomic Concerns, Access to Affordable Health Care, Medical Research and Health Professions Education.

The ISR was conducted before the onset of COVID 19, and therefore, does not reflect the pandemic's impact which dramatically affected community and hospital services. Many of our hospital services were paused or deferred as we navigated the emergent COVID 19 landscape. Caring for our community is essential, and part of that is sharing accurate, up-to-date information on health-related topics with our community. We provided COVID 19 education, vaccine distribution and collaborative services with government, health departments and community based organizations to keep our communities safe. As we continue to serve our communities we are committed to addressing the needs identified in the previous ISR.

Cleveland Clinic uses evidence-based approaches in the delivery of healthcare services and educational outreach with the aim of achieving healthy outcomes for the community it serves. It undertakes periodic monitoring of its programs to measure and determine their effectiveness and ensure that best practices continue to be applied. Given that the process for evaluating the impact of various services and programs on population health is longitudinal by nature, significant changes in health outcomes may not manifest for several community health needs assessment cycles. We continue to evaluate the cumulative impact.

The narrative below describes the strategies, modifications made to the action plans, and highlighted impacts for each health priority area.

Addiction and Mental Health

Actions and Highlighted Impacts:

- a. In addition to direct patient care, Cleveland Clinic's Opioid Awareness Center, provided intervention and treatment for substance abuse disorders to Cleveland Clinic caregivers and their family members.
 - Opioid misuse continues to be a public health emergency, contributing to over 50,000 U.S. deaths a year. About 40% of those deaths involve prescription opioids. Our comprehensive efforts to improve opioid prescribing have yielded reductions in these prescriptions by our providers for two years running, including a large improvement in 2021.
- b. Through the Opioid Awareness Center, participated in the Northeast Ohio Hospital Opioid Consortium and Cuyahoga County Opiate Task Force, and community-based classes and presentations. Cleveland Clinic continues to provide preventative education and share evidence-based practices.
- c. In partnership with the Cleveland Clinic Pediatric Institute, engage Mayfield students in health education. Due to COVID restrictions, all student education provided by outside organizations was suspended throughout 2020 & 2021 at Mayfield Schools.
- d. In partnership with the Geauga ADAMHS Board, provided an opioid community health education program. Due to COVID restrictions, no community programs were being offered.
- e. Cleveland Clinic developed suicide and self-harm policies procedures and screening tools for patients in a variety of care settings.

Chronic Disease Prevention and Management

Actions and Highlighted Impacts:

- a. Improve management of chronic conditions through Chronic Care Clinics employing a specialized model of care.
 - COVID 19 created a delay in treatment for many community members. We launched an effort to connect patients with care, proactively contacting over 300,000 patients and scheduling 57,000 appointments. This outreach is prompting more patients to complete recommended screening tests, allowing earlier detection of cancers and other diseases when they are most treatable. For example, 1,700 precancerous lesions of the colon have been detected earlier as a result — a key part of preventing colon cancer.

- Many in-person community programs were paused by COVID 19. When COVID-19 vaccines became available, we co-lead a nationwide campaign to encourage adults to get vaccinated. The coalition of 60 top hospitals and healthcare institutions communicated the vaccines' safety and effectiveness through diverse digital and traditional media. Throughout the years, our health experts explained and advocated the benefits of vaccination at every opportunity, from patient visits to national media appearances. In late 2021, when cases of the omicron variant surged and hospitals filled with unvaccinated patients, we joined with five other Northeast Ohio hospital systems in an advertising campaign urging the public to get vaccinated and take other precautions.
- b. In collaboration with the Community Partnership on Aging, provided health promotion programs for older adults.
- c. Through a partnership with the City of Mayfield Heights, the city's Employee Wellness Initiative with biometric screenings and health education was paused due to COVID.
- d. Provided free mammograms and skin cancer screenings in partnership with the Willoughby Hills and Stephanie Tubbs Jones Family Health Centers.
 - In collaboration with Taussig Cancer Center & Radiology Institute, Hillcrest Hospital reached out to women who lacked healthcare access, experienced barriers or were un-insured to schedule and complete a mammogram. These mammogram clinics were promoted in Cuyahoga, Lake and Geauga counties; they were held at the Willoughby Hills Family Health Center. Women who needed further assistance after an abnormal mammogram were contacted by the Hillcrest Cancer Center Community Outreach nurse who assisted in follow-up appointments.
 - In collaboration with the Dermatology Institute, Hillcrest Cancer Center provided a community skin cancer screening event in 2019.
- e. In partnership with the Euclid Public Library, provided a quarterly health education program.
- f. Provided cancer-related health promotion messaging, health education, and outreach within local schools and community-based settings.
 - Hillcrest Cancer Center community education programs on topics of cervical, breast, skin and colon cancers as well as HPV vaccine in 2019.
 - Hillcrest Cancer Center provided health education to Mayfield High School students on the topics of breast, cervical and testicular cancers in 2019.
- g. Through the Healthy Communities Initiative (HCI), partnered to fund programs designed to improve health outcomes in four core areas: physical activity, nutrition, smoking, and lifestyle management.

- Prior to COVID 19, Healthy Communities Initiative provided in 23 programs in 59 NE Ohio zip codes with total participation of 2,813 community residents. Results indicated decreased blood pressure abnormality, increased physical activity and increased healthy eating behaviors.

Infant Mortality

Actions and Highlighted Impacts:

- Provided expanded evidence-based health education to expecting mothers and families.
- Hillcrest Hospital provided community education in efforts to support pregnant persons with resources and best practices to reduce infant and maternal health and have a successful pregnancy.
- Fairview Hospital, Hillcrest Hospital and Akron General Medical Center provided Childbirth Education and Lactation Services, in-person and virtually, to over 10,000 families in 2020 and over 12,000 families in 2021.
- We established a Pregnancy Early Assessment Clinic (PEAC) to focus on early pregnancy complications. As one of the few clinics like it in the U.S., the PEAC ensures newly pregnant individuals access the care they need, when they need it.
- Participated in First Year Cleveland, the Cuyahoga County Infant Mortality Task Force to gather data, align programs, and coordinate a systemic approach to improving infant mortality. In 2020 and 2021 Cleveland Clinic physicians provided clinical and administrative expertise on the Executive Board of First Year Cleveland.
- Expanded capacity to offer the Centering Pregnancy group prenatal care model to expecting mothers and market the program to community members.
- Cleveland Clinic is acting to address health disparities and give all infants a healthy start. We expanded Centering programs to bring new mothers together for supportive prenatal care and parenting education. Centering Pregnancy groups provided in-person, virtually and hybrid in Cuyahoga, Summit and Lorain Counties.
- Cleveland Clinic is providing obstetric navigators to promote maternity care and help parents with food, transport and other socioeconomic needs.
- Outreach events like Community Baby Showers provided health information to families in specific high-risk geographical areas and encourage enrollment in supportive evidence-based programs. Community health education continued through virtual education and Centering programs.
- Provided safe sleep education for all families within childbirth classes and the Hillcrest Hospital Family Maternity Center through partnerships with Cribs for Kids and the Fatherhood Initiative, provide cribs or pack & play cribs to families in need.

Socioeconomic Concerns

Actions and Highlighted Impacts:

- a. Cleveland Clinic implemented a system-wide social determinants screening tool for adult patients to identify needs such as alcohol abuse, depression, financial strain, food insecurity, intimate partner violence, and stress.
- b. We implemented a common community referral data platform to coordinate services and ensure optimal communication.
 - Cleveland Clinic collaborated with Unite Ohio to build a coordinated care network of health and social service providers. Cleveland Clinic went live on the platform on July 2021 and has sent nearly 2,000 referrals with a gap closure of 44%.
- c. Cleveland Clinic piloted patient navigation programming within a partnership pathway HUB model using community health workers and/or the co-location of community organizations with hospital facilities.
- d. Participate in the Robert Wood Johnson Foundation (RWJF) Cross-Sector Innovation Initiative Project in Cuyahoga County which aims to impact structural racism across various sectors.
 - Cleveland Clinic is an inclusive organization that values diversity and equity. Our caregivers and leaders continue to become more diverse. Among newly hired or promoted leaders in 2021, 21% identify as an underrepresented minority. We will continue to make our caregiver family increasingly inclusive to better serve all our communities.
- e. Sponsored and participated in *Say Yes to Education Cleveland*, a consortium focused on increasing education levels, fostering population growth, improving college access and spurring economic growth.
- f. Provided workforce development and training opportunities for youth K-12 in clinical and non-clinical areas, empowering Northeast Ohio's next generation of leaders.
 - Hillcrest caregivers participated in Career Days at Mayfield High School in 2019 to highlight healthcare careers.
 - Hillcrest provided mentors to oversee clinical experiences for students enrolled in the Mayfield Schools Medical Tech program.
 - Hillcrest caregivers served as mentors for high school students who participated in the Summer Science Internship Program, which helps develop skills in communication, teamwork and knowledge of healthcare fields.
 - In 2021, Cleveland Clinic, an anchor institution in the Cleveland Innovation District, collaborated with the state of Ohio to launch in 2021 an initiative to advance healthcare and digital technology, attract and create new

- businesses, and train the workforce of the future. The state of Ohio and Cleveland Clinic pledged to contribute a combined \$565 million for the district — the largest research investment in our history.
- g. Provided transportation on a space-available basis to 1) patients within 5 miles of the Stephanie Tubbs Jones Health Center and Marymount, Euclid, Lutheran, and South Pointe Hospitals and 2) radiation oncology patients within 25 miles of Cleveland Clinic Main Campus, Hillcrest, and Fairview Hospitals.

Access to Affordable Health Care

Actions and Highlighted Impacts:

- a. Patient Financial Advocates assisted patients in evaluating eligibility for financial assistance or public health insurance programs.
- Cleveland Clinic provided medically necessary services to all patients regardless of race, color, creed, gender, country of national origin, or ability to pay. The hospital has a financial assistance policy that is among the most generous in the region that covers both hospital services and physician services provided by physicians employed by the Cleveland Clinic. In 2021, Cleveland Clinic health system provided over \$178 million in financial assistance to its communities in Ohio, Florida, and Nevada.
- b. Provided parking vouchers to Emergency Department patients on campuses where parking fees are assessed.
- c. Provided walk-in care at Express Care Clinics and offer evening and weekend hours
- d. Utilizing medically secure online and mobile platforms, connected patients with Cleveland Clinic providers for telehealth and virtual visits.
- In 2021, Cleveland Clinic provided 841,000 virtual visits.

Medical Research and Health Professions Education

Actions and Highlighted Impacts:

- a. Through medical research, advanced clinical techniques, devices and treatment protocols in the areas of cancer, heart disease, diabetes, and others.
- Research into diseases and potential cures is an investment in people's long-term health.
 - In 2020, COVID-19 highlighted the significance of research in community health. Cleveland Clinic research findings increased knowledge about the virus and how best to respond to it. Our researchers developed the

world's first COVID-19 risk-prediction model, enabling healthcare providers to calculate an individual patient's likelihood of testing positive for infection as well as their probable outcome from the disease.

- For 2021, Cleveland Clinic's community benefit in support of research was \$101 million.
- b. Through the Center for Populations Health Research, informed clinical interventions, healthcare policy, and community partnerships.
- c. Sponsored high-quality medical education training programs for physicians, nurses, and allied health professionals.
 - Cleveland Clinic provided a wide range of high-quality medical education that includes accredited training programs for residents, physicians, nurses and allied health professionals. By educating medical professionals, we ensure that the public receives the highest level of medical care and will have access to highly trained health professionals in the future. For 2021, Cleveland Clinic's community benefit in support of education was \$322 million.

Community Feedback

Community Health Needs Assessment reports from 2019 were published on the Hillcrest Hospital website. No community feedback has been received as of the drafting of this report. For more information regarding Cleveland Clinic Community Health Needs Assessments and Implementation Strategy reports, please visit www.clevelandclinic.org/CHNAreports or contact CHNA@ccf.org.

Secondary Data Scoring Indicators of Concern

From the secondary data scoring results, Health Care Access & Quality ranked as the 11th highest scoring health need, with a score of 1.40. Further analysis was done to identify specific indicators of concern. Those indicators with high data scores (scoring at or above the threshold of 1.50) were categorized as indicators of concern and are listed in Table 9 below. For each indicator, there is an indicator score, county value, state value, and national value (where available). Additionally, there are state and national county distributions for comparison along with indicator trend information. The legend (Figure 47) on the right shows how to interpret the distribution gauges and trend icons used in the data scoring results for each health topic by county (Table 8).

Figure 47: Prioritized Health Needs

	If the needle is in the red, the county value is in the worst 25% (or worst quartile) of counties in the state or nation.
	If the needle is in the green, the county value is in the best 50% of counties in the state or nation.
	The indicator is trending down, significantly, and this is not the ideal direction.
	The indicator is trending down and this is not the ideal direction.
	The indicator is trending up, significantly, and this is not the ideal direction.
	The indicator is trending up and this is not the ideal direction.
	The indicator is trending down, significantly, and this is the ideal direction.
	The indicator is trending down and this is the ideal direction.
	The indicator is trending up, significantly, and this is the ideal direction.
	The indicator is trending up and this is the ideal direction.

Table 13: Secondary Data Scoring Indicators of Concern: Prioritized Health Topic #4: Maternal and Child Health (Maternal, Fetal and Infant Health)

Maternal and Child Health came up as areas of concern in the secondary data analysis. Among all health topics, Children's Health ranked tenth with a score of 1.42 and Maternal, Fetal and Infant Health ranked 12th with a score of 1.36. Women's Health ranked fifth with a score of 1.52. Further analysis was done to identify specific indicators of concern. Those indicators with high data scores (scoring at or above the threshold of 1.50) were categorized as indicators of concern and are listed in Table 13 below. See Appendix C for the full list of indicators categorized within this topic.

Appendix D: Community Input Assessment Tools

CCF identified key community stakeholders to provide vital perspectives and context around important community health issues. CCF and HCI worked to develop a questionnaire to determine what a community needs to be healthy, what barriers to health exist in the community, how COVID-19 has impacted health in the community and how the challenges identified might be addressed in the future. Below is the complete Key Stakeholder Interview Guide:

WELCOME: Cleveland Clinic *{hospital name}* is in the process of conducting our 2022 comprehensive Community Health Needs Assessment (CHNA) to understand and plan for the current and future health needs of our community. You have been invited to take part in this interview because of your experience working *{at organization}* in the community. During this interview, we will ask a series of questions related to health issues in your community. Our ultimate goal is to gain various perspectives on the major issues affecting the population that your organizations serves and how to improve health in your community. We hope to get through as many questions as possible and hear your perspective as much as time allows.

TRANSCRIPTION: For today's call we are using the transcription feature in MS Teams. This feature produces a live transcript and makes meetings more inclusive for those who are deaf, hard of hearing, or have different levels of language proficiency. Our primary purpose for using this feature is to assist with note taking.

CONFIDENTIALITY: For this conversation, I will invite you to share as much or little as you feel comfortable sharing. The results of this assessment will be made available to the public. Although we will take notes on your responses, your name will not be associated with any direct quotes. Your identity will be kept confidential, so please share your honest opinions.

FORMAT: We anticipate that this conversation will last ~45 minutes to an hour.

Section #1: Introduction

- What community, or geographic area, does your organization serve (or represent)?
 - How does your organization serve the community?

Section #2: Community Health and Well-being

- From your perspective, what does a community need to be healthy?

- What do you believe are the 2-3 most important issues that must be addressed to improve health and quality of life in your community?

Section #3: Barriers to Health

- What health disparities appear most prevalent in your community?
- What are the barriers or challenges to improving health in the community?
 - What makes some people healthy in the community while others experience poor health?
 - What particular parts of the community or geographic areas that are underserved or under-resourced?
 - What services are most difficult to access?
- What could be done to promote health equity?

Section #4: COVID-19

- How has COVID-19 impacted health in your community?
 - What were the most significant health concerns prior to the pandemic vs now?
 - What populations have been most affected by COVID-19?
- How has COVID-19 impacted access to care in the community?
 - What about access to mental health or substance use treatment in the community?
 - What about emergency and preventative care services?

Section #5: Addressing the Challenges & Solutions

- What are some possible solutions to the problems that we have discussed?
 - How can organizations such as hospitals, health departments, government, and community-based organizations work together to address some of the problems that have been mentioned?
- How can we make sure that community voices are heard when decisions are made that affect their community?
 - What would be the best way to communicate with community members about progress organizations are making to improve health and quality of life?
- What resources does your community have that can be used to improve community health?

Section #6: Conclusion

- Is there anything else that you think would be important for us to know as we conduct this community health needs assessment?

CLOSURE SCRIPT: Thank you again for taking time out of your busy day to share your experiences with us. We will include the key themes from today's discussion in our assessment. Please remember, your name will not be connected to any of the comments you made today. Please let us know if you have any questions or concerns about this.

Appendix E: Community Partners and Resources

This section identifies other facilities and resources available in the community served by Hillcrest Hospital that are available to address community health needs.

Federally Qualified Health Centers

Ohio's Association of Community Health Centers (OACHC) is a not-for-profit membership association representing Federally Qualified Health Centers (FQHCs).²⁷ FQHCs are established to promote access to ambulatory care in areas designated as medically underserved. These clinics provide primary care, mental health, and dental services for lower-income members of the community. FQHCs receive enhanced reimbursement for Medicaid and Medicare services and most also receive federal grant funds under Section 330 of the Public Health Service Act. OACHC represents Ohio's 57 Community Health Centers at 400 locations, including multiple mobile units. The following FQHC clinics and networks operate in the Hillcrest Hospital Community:

- Asian Services in Action, Inc.
- Axesspointe Community Health Center, Inc.
- Care Alliance
- Community Support Services, Inc.
- Health Source of Ohio
- MetroHealth Community Health Centers (MHCHC)
- Neighborhood Family Practice
- Northeast Ohio Neighborhood Health Services²⁸
- Signature Health, Inc.
- The Centers

Hospitals

In addition to several Cleveland Clinic hospitals in Northeast Ohio, the following is a list of other hospital facilities located in the Hillcrest Hospital Community:

²⁷ Ohio Association of Community Health Centers, <https://www.ohiochc.org/page/178>

²⁸ Data search August 15, 2022

- Akron Children's Hospital
- Crystal Clinic Orthopaedic Center
- Grace Hospital
- MetroHealth Medical Centers (Multiple Locations)
- Select Specialty Hospital- Akron
- St. Vincent Charity Medical Center
- Summa Health System – Akron Campus
- University Hospitals (Multiple Locations)
- Western Reserve Hospital

Other Community Resources

A wide range of agencies, coalitions, and organizations that provide health and social services is available in the region served by Hillcrest. United Way 2-1-1 Ohio maintains a large, online database to help refer individuals in need to health and human services in Ohio. This is a service of the Ohio Department of Social Services and is provided in partnership with the Council of Community Services, The Planning Council, and United Way chapters in Cleveland. United Way 2-1-1 Ohio contains information on organizations and resources in the following categories:

- Donations and Volunteering
- Education, Recreation, and the Arts
- Employment and Income Support
- Family Support and Parenting
- Food, Clothing, and Household Items
- Health Care
- Housing and Utilities
- Legal Services and Financial Management
- Mental Health and Counseling
- Municipal and Community Services
- Substance Abuse and Other Addictions

Additional information about these resources is available at: <http://www.211oh.org/>

Appendix F: Acknowledgements

Conduent Healthy Communities Institute (HCI) supported report preparation. HCI works with clients across the nation to drive community health outcomes by assessing needs, developing focused strategies, identifying appropriate intervention programs, establishing monitoring systems, and implementing performance evaluation processes.
