

Nuclear Medicine Technology

The Cleveland Clinic training program in **Nuclear Medicine Technology** is designed to fulfill the clinical training requirements for students enrolled in an affiliated College or University. During the clinical program, students will gain hands-on experience in the performance of imaging procedures, computer processing of image data, quality control of equipment and the proper use and handling of radioactive products. The Cleveland Clinic Nuclear Medicine Department is one of the largest departments in the country and utilizes a wide variety of state of the art equipment, an onsite radio pharmacy lab and an expert group of Board certified and well trained technologists to assist in the clinical education of the student.
