

Patient Evaluations for Kidney Transplantation

New Service Available at South Pointe Hospital

Physicians from Glickman Urological & Kidney Institute's No. 1 ranked urology and nephrology* programs are now available at South Pointe to see kidney disease patients interested in transplantation.

The benefits of a successful kidney transplant are many. Most people find they have increased stamina and energy. They can return to a more normal lifestyle, and those who were dependent upon dialysis can enjoy newfound freedom.

Potential transplant candidates include:

- Patients suffering from chronic kidney disease (CKD) Stage 4 or 5
- Patients currently receiving chronic dialysis treatment

The majority of evaluation, testing and lab work will be performed in the familiarity of South Pointe Hospital, where parking is free and our employees and volunteers are happy to assist you. Transplant surgery will occur at Cleveland Clinic's main campus.

For more information or to begin the transplant referral process, please call 216.444.6996 and ask about our South Pointe evaluation clinic.
